

Introduction to Git

Database Systems
DataLab, CS, NTHU
Spring, 2023

Outline

- Version control system
- Git basics
- Git branch
- Remote repository

Version Control System

- Store the projects, keep your **revision history**
- **Synchronization** between modifications made by different developers

Outline

- Version control system
- **Git basics**
- Git branch
- Remote repository

Git

- Git is a version control system which is
 - Fast
 - Easy to use
 - Distributed
 - Able to handle large project
(ex. Linux Kernel 27.8 million lines)
- A git repository is a mini database that tracks your files

Installation

- Please check this link
 - <http://git-scm.com/book/en/Getting-Started-Installing-Git>

Configuration

- Modify `~/.gitconfig`
- Or, type in following commands

```
git config --global user.name "your name"
```

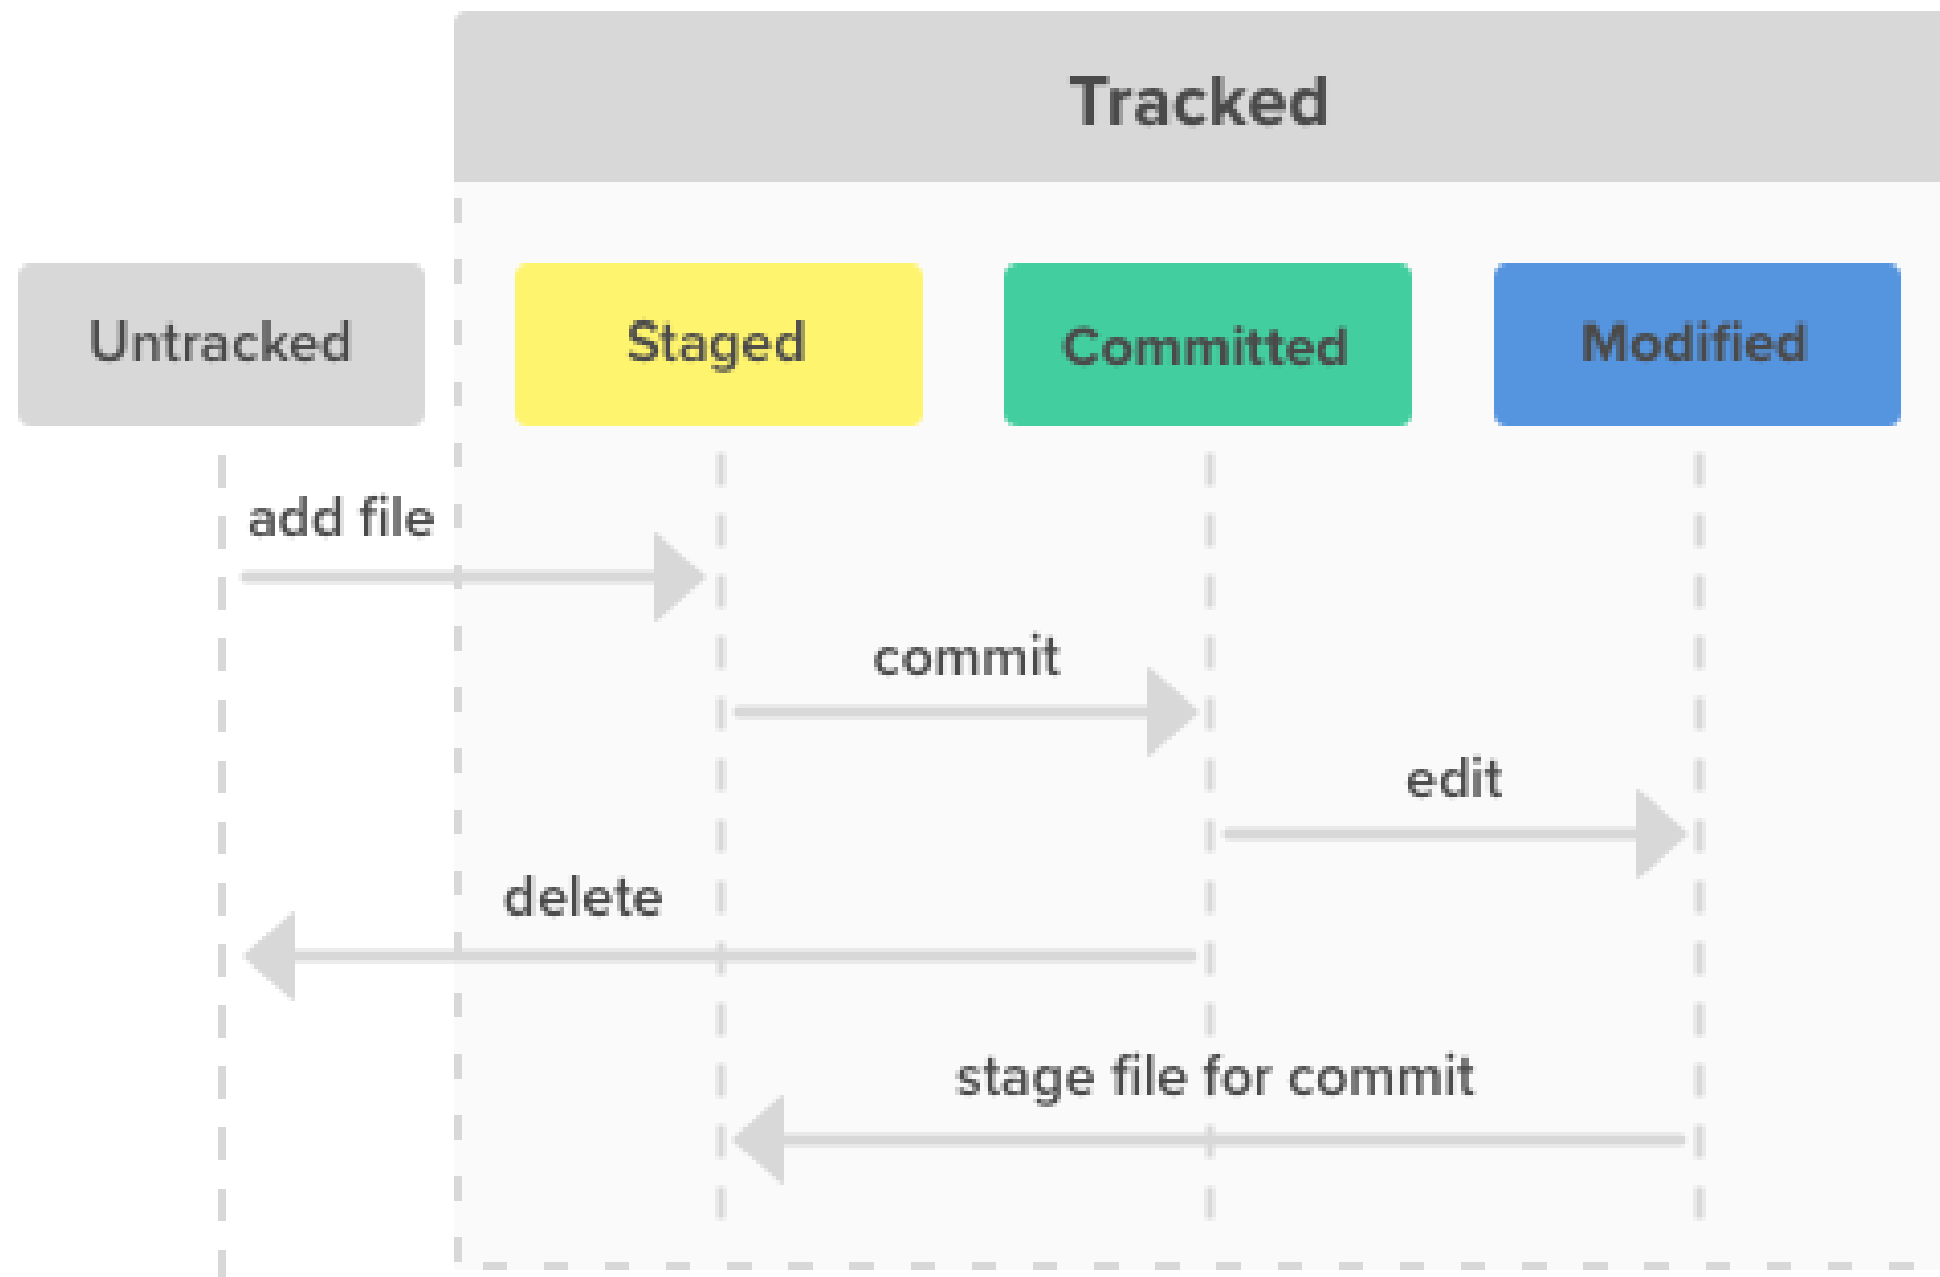

```
git config --global user.email "your@email.com"
```

* For more information, please refer this [link](#).

Creating a new Repository

- Two ways to create a repository
 - Initializing a Repository in an Existing Directory
`git init`
 - Cloning an Existing Repository
 - We will talk about it later
- The repository information will be stored in the `.git` directory

Committing A Version

Committing A Version

- Staging (adding) a file

```
git add [file name]
```

- Staging all files in the current directory

```
git add -A
```

- Committing

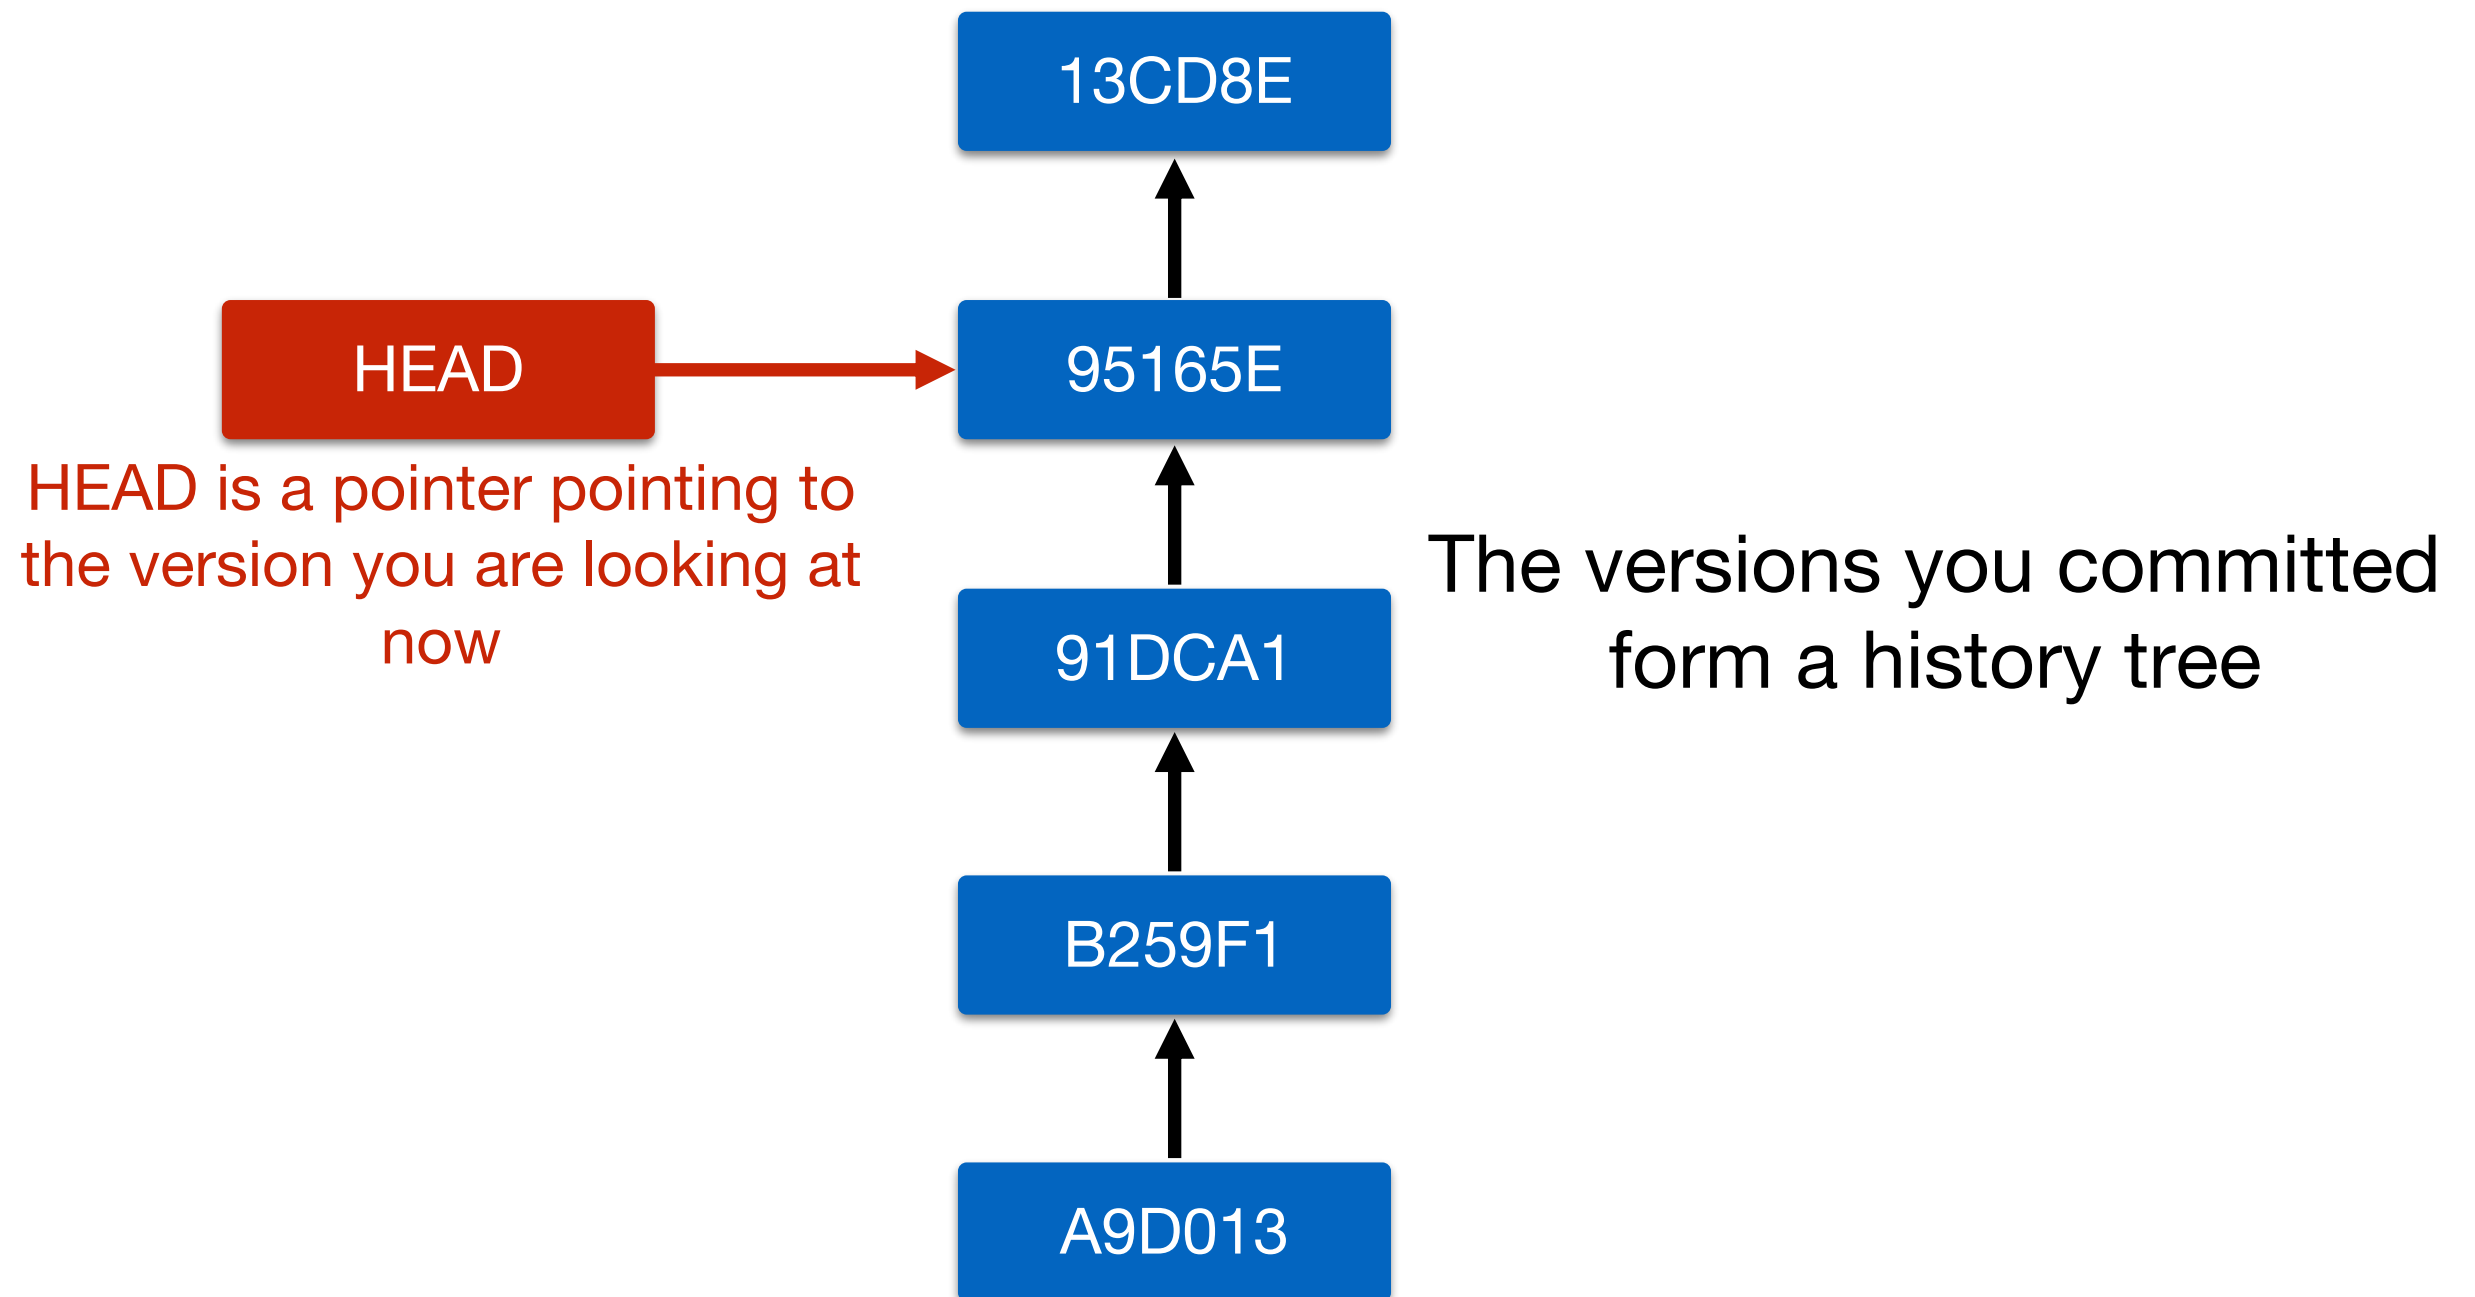

```
git commit -m "[message]"
```

Status

- Checking the current status and the current branch

```
git status
```

A History Tree

Logs

- Listing the log

```
git log
```

- Listing each log in one line

```
git log --oneline
```

```
user@DESKTOP-UUF072K MINGW64 ~/Desktop/test/practice-submission (master)
```

```
$ git log
```

```
commit 25f75ca42a96a900a6f87994a6b4fd70583d5561 (HEAD -> master, origin/master, origin/HEAD)
```

```
Author: kkeevin123456 <kkeevin123456@gmail.com>
```

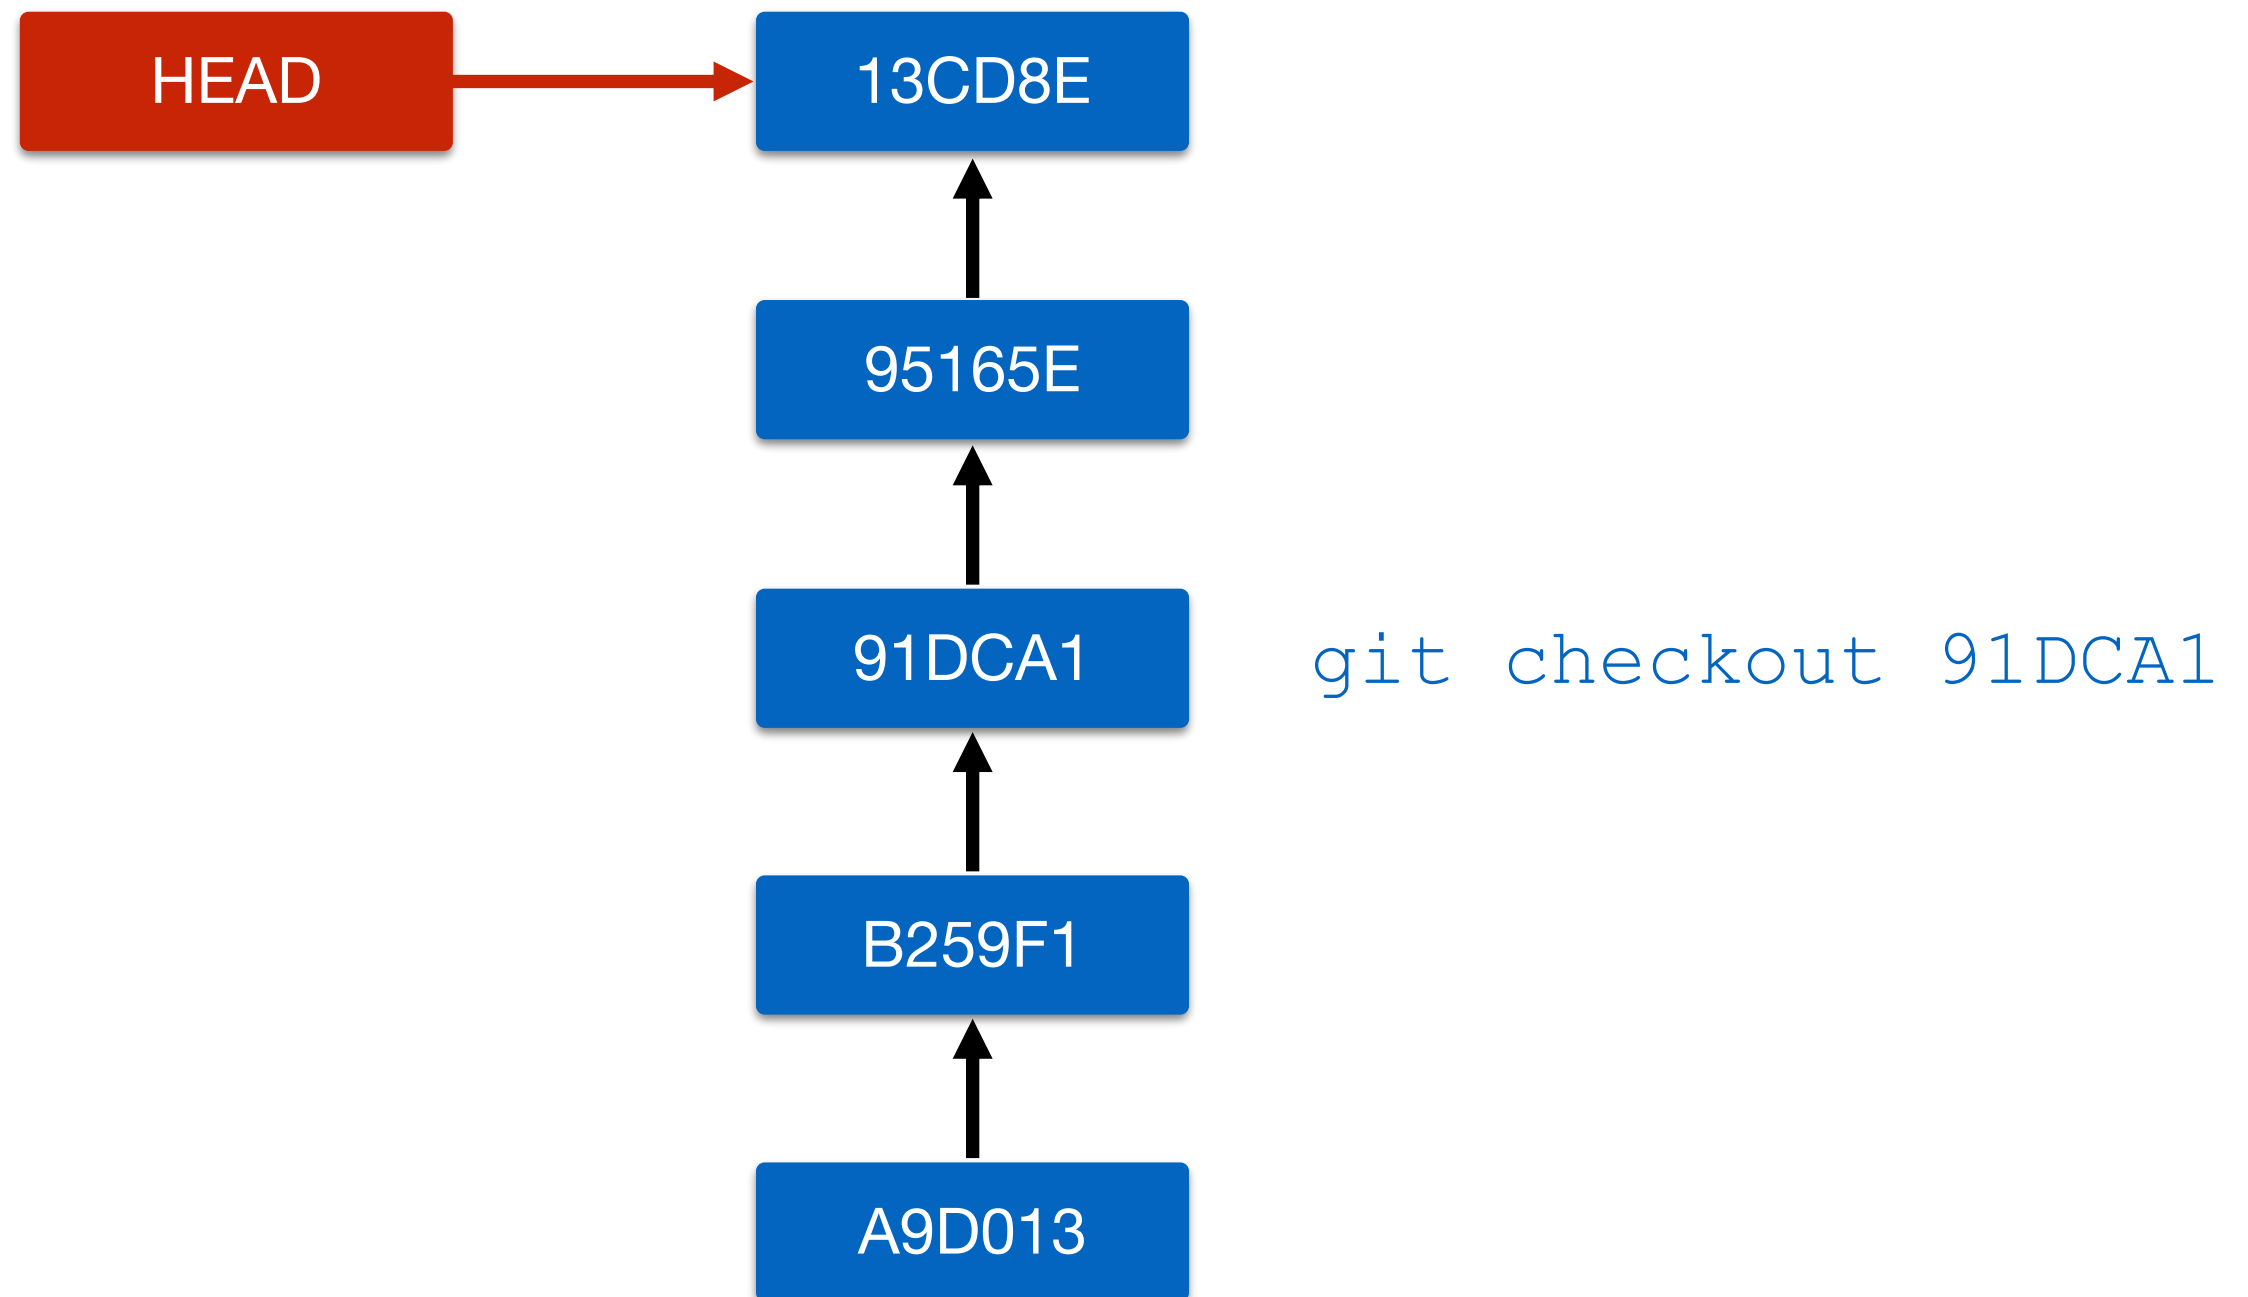

```
Date: Sat Mar 6 11:02:23 2021 +0800
```

```
add branch
```

```
commit d7533bf6016e3faf834e9e38f8dfd552960728d1 (origin/p123786579, origin/109065541, origin/109062608, origin/107062301, origin/107062261, origin/107062233, origin/107062231, origin/107062230, origin/107062228, origin/107062123, origin/107062115, origin/107060023, origin/107060015, origin/107060008, origin/107060007, origin/107034054, origin/107000115, origin/107000105, origin/106072108, origin/106070034, origin/106070033, origin/106070007, origin/106062133, origin/106062110, origin/106062109, origin/106033233, origin/106021225, origin/106012042, origin/104061701, origin/101000030, p123786579, 109065541, 109062608, 108065702, 108003809, 107062381, 107062325, 107062301, 107062261, 107062233, 107062231, 107062230, 107062228, 107062123, 107062115, 107060023, 107060015, 107060008, 107060007, 107034054, 106070033, 106070007, 106062315, 106062306, 106062214, 106062205, 106062142, 106062137, 106062133, 106062110, 104061701, 101000030)
```

```
Author: chanchishen <csch@datalab.cs.nthu.edu.tw>
```

Checking Out A Version

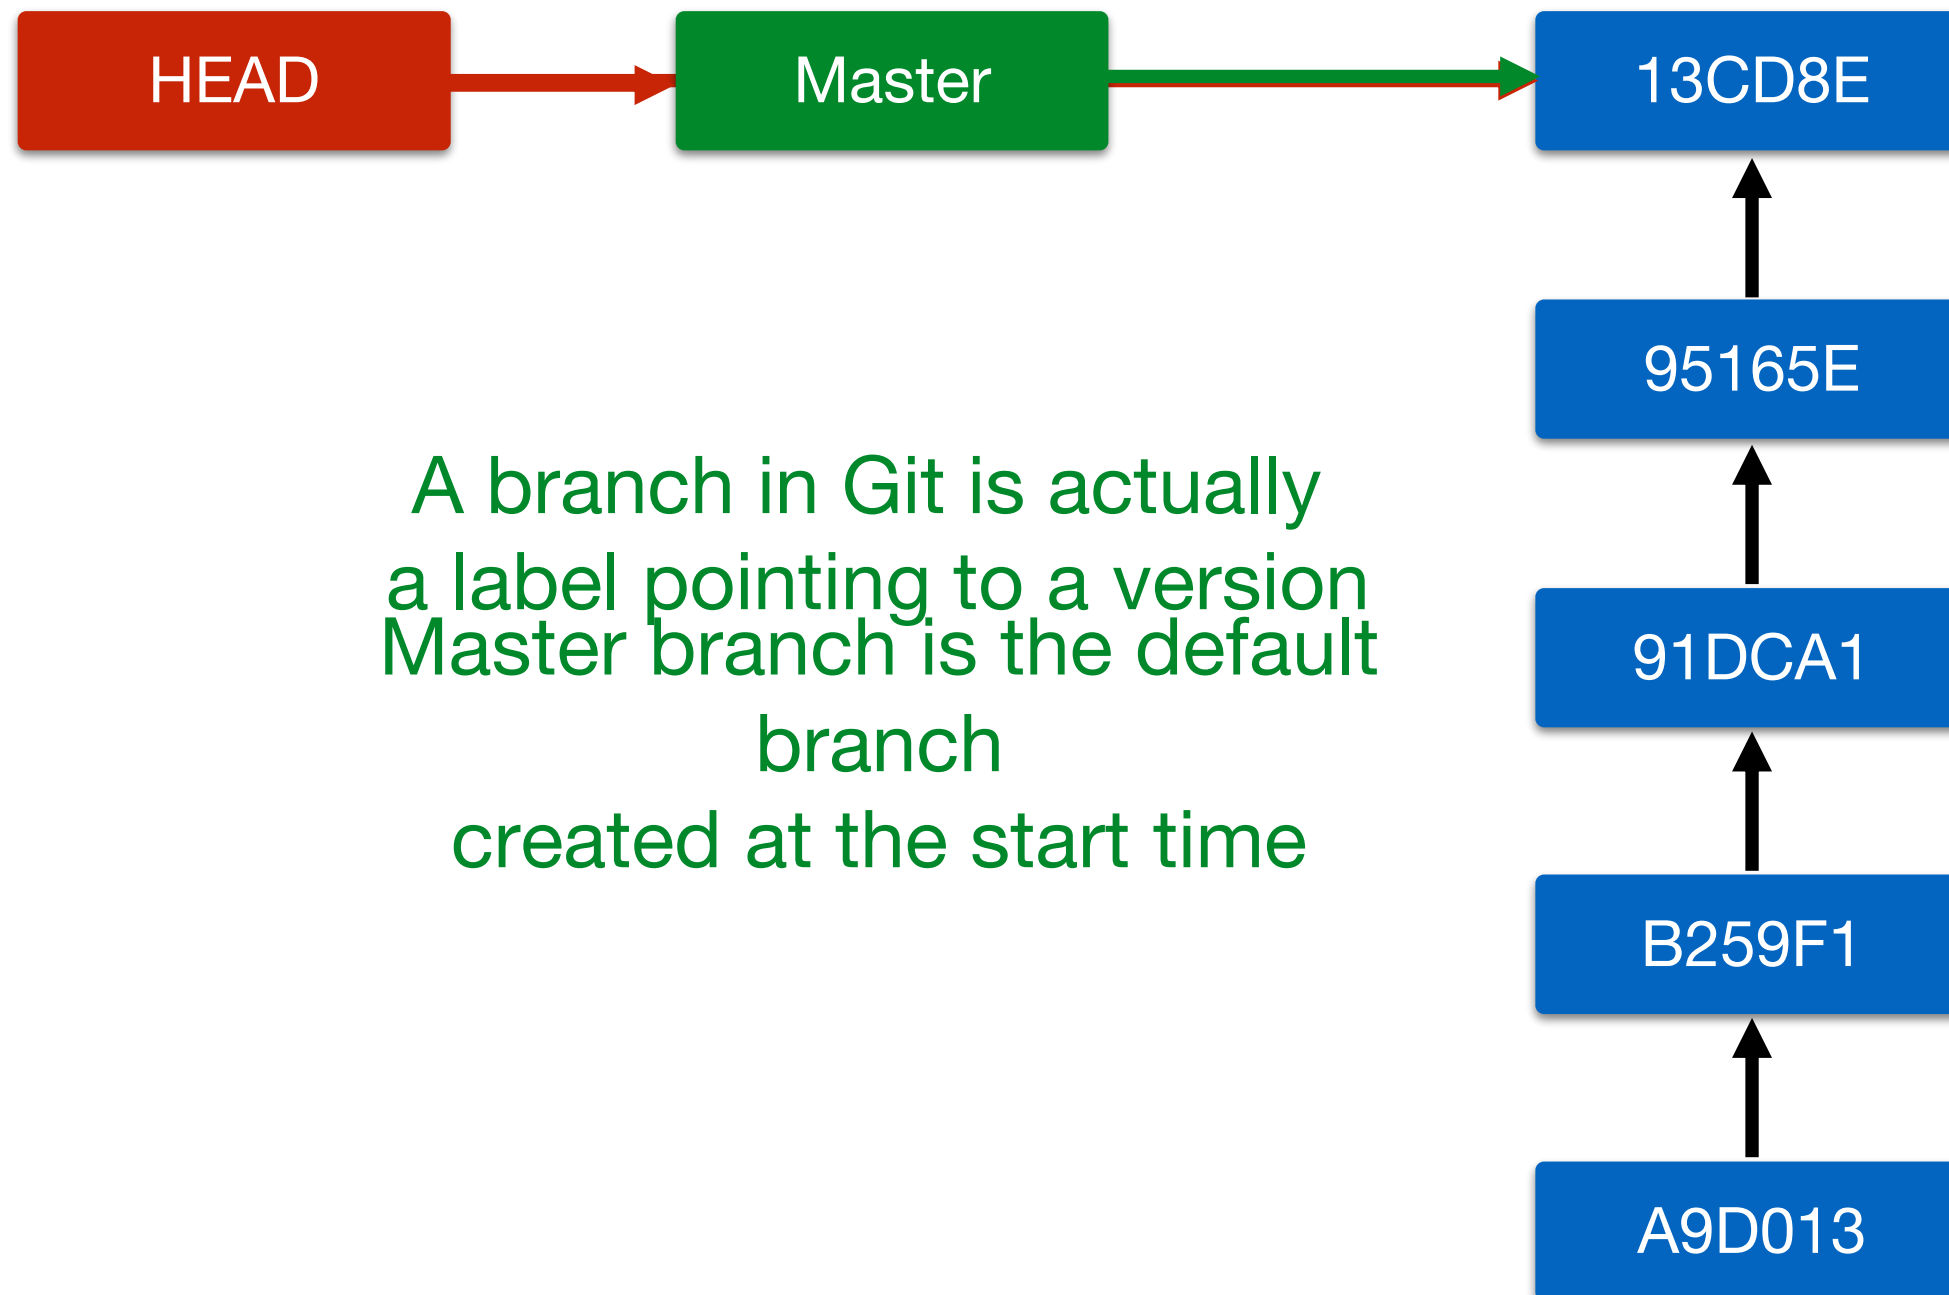

Outline

- Version control system
- Git basics
- **Git branch**
- Remote repository

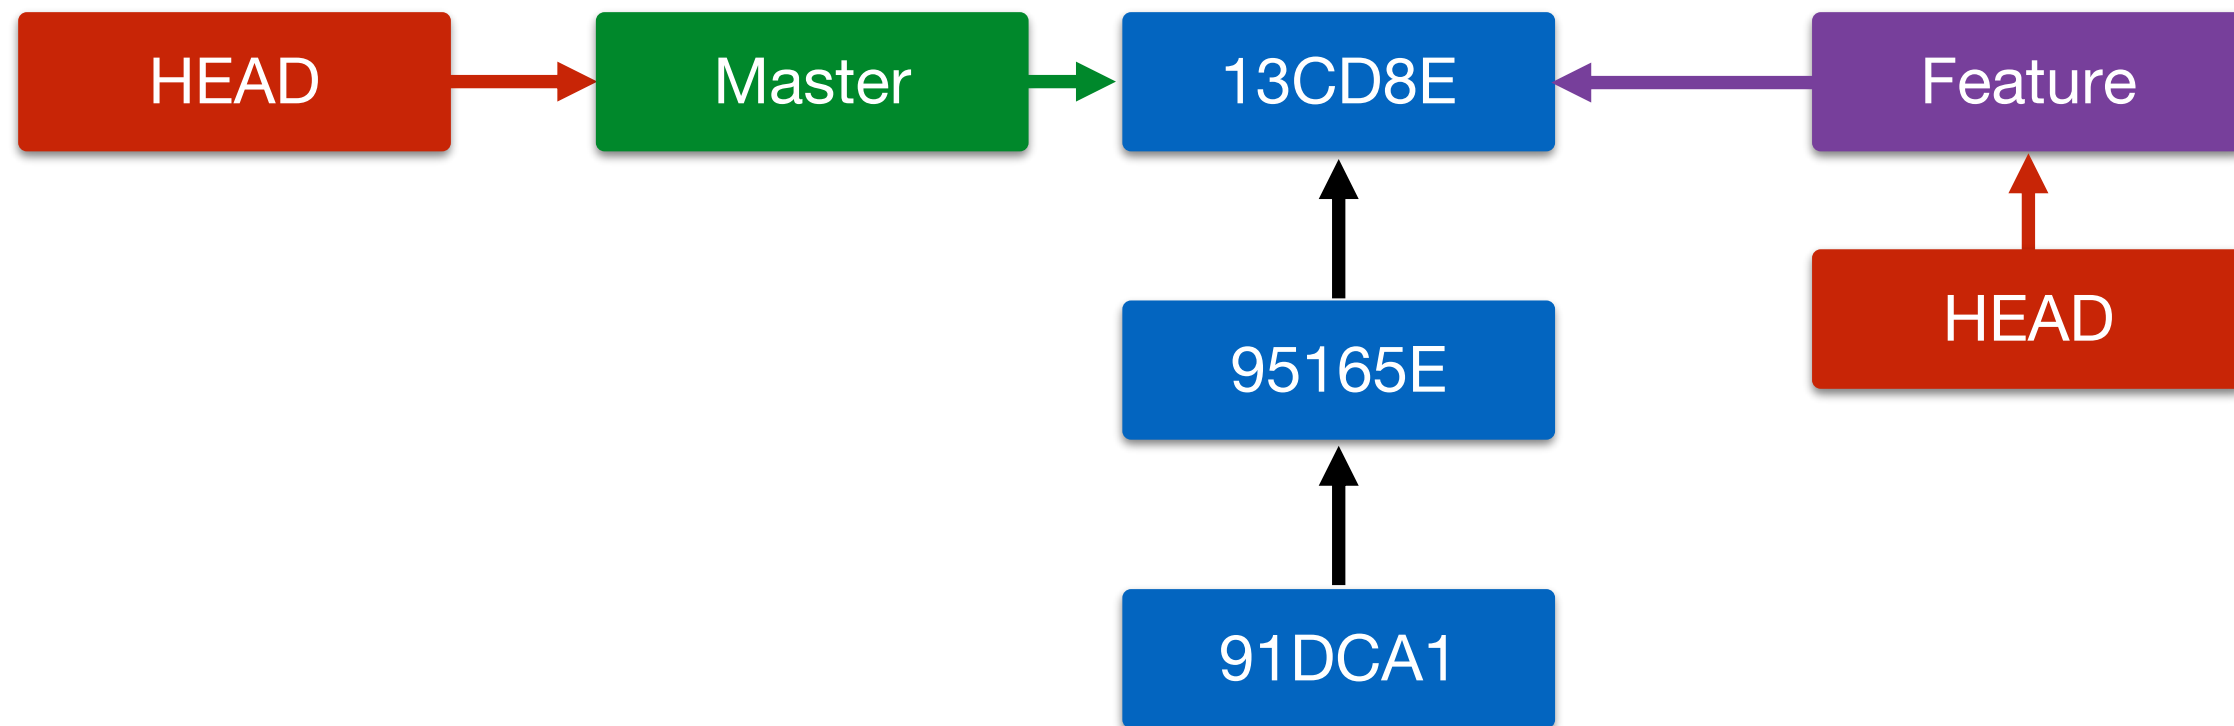

Branches

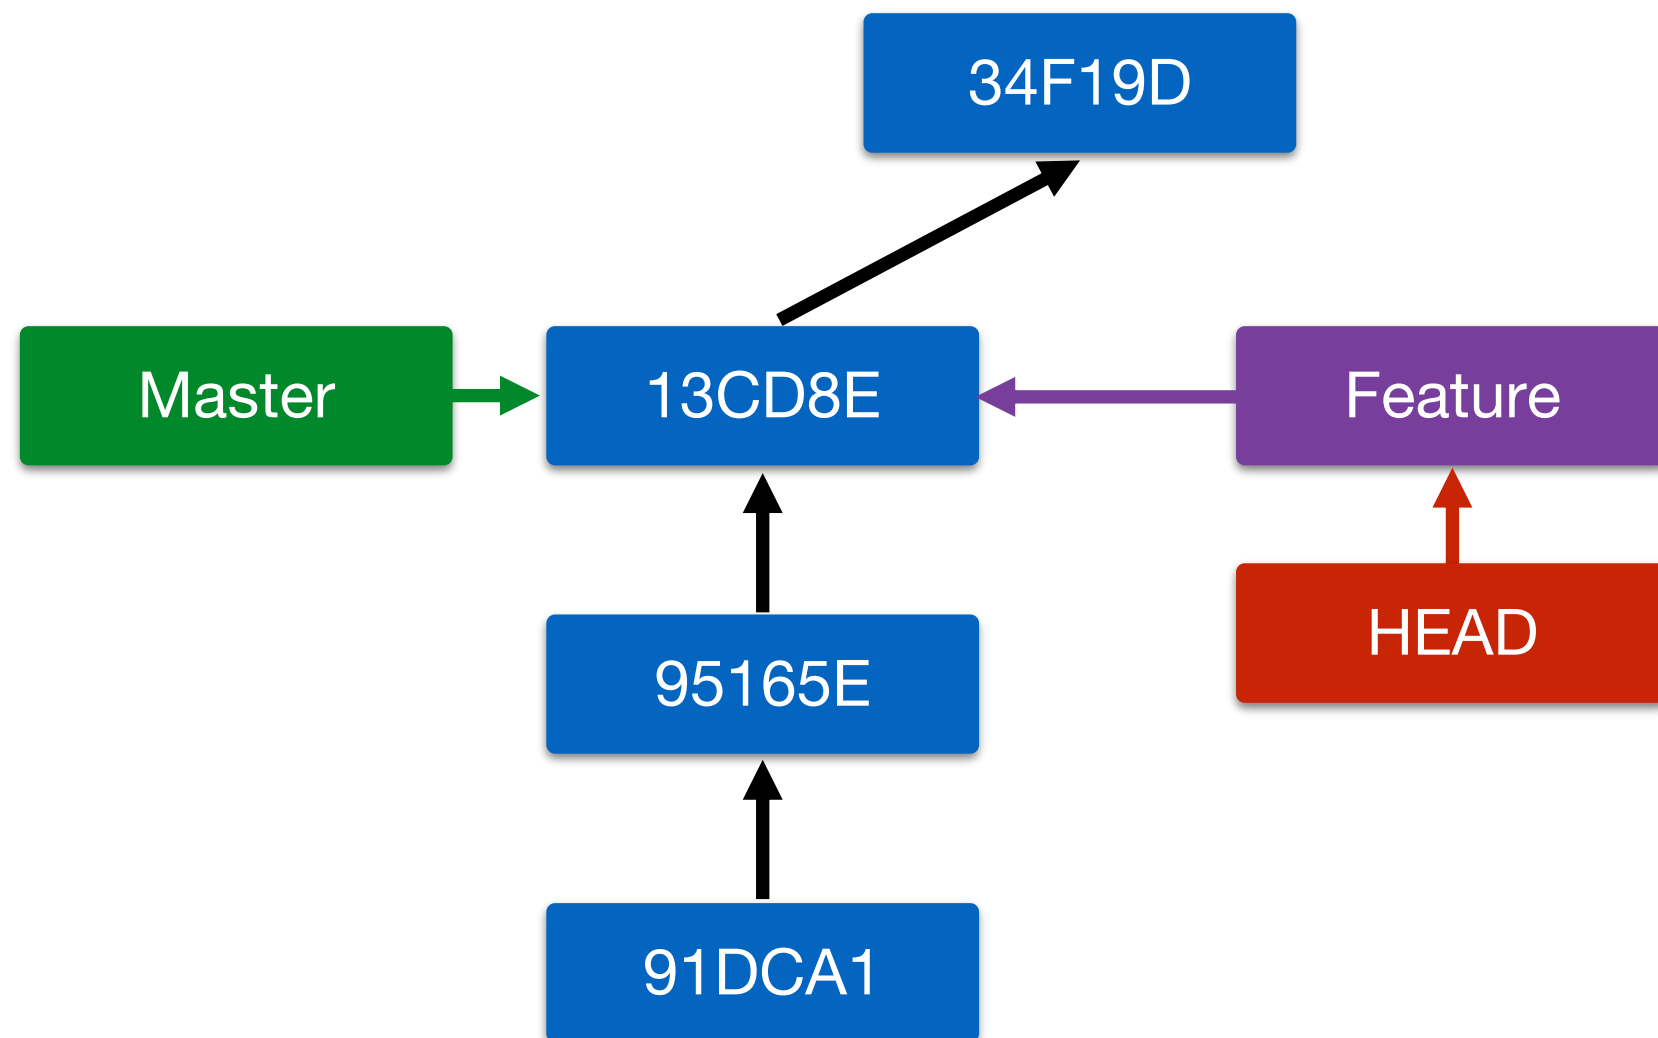

The Master Branch

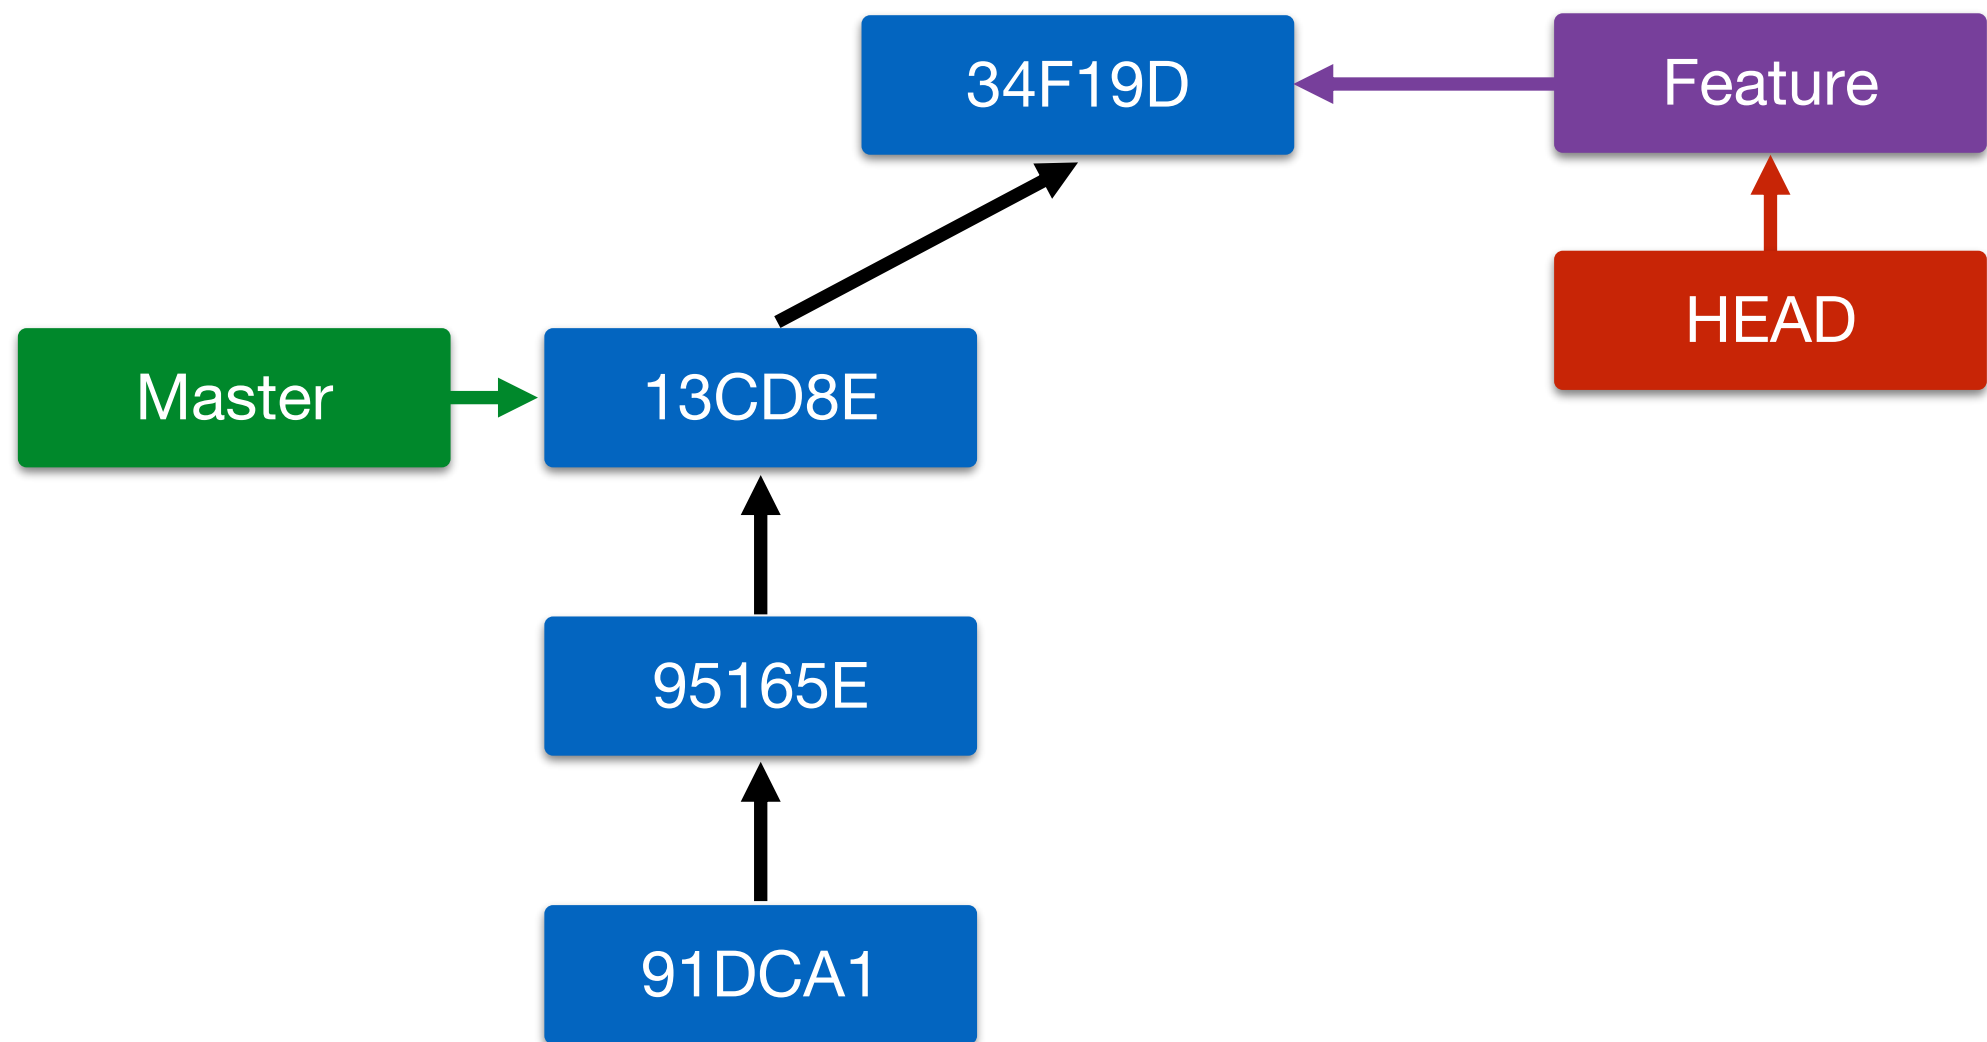

Branching

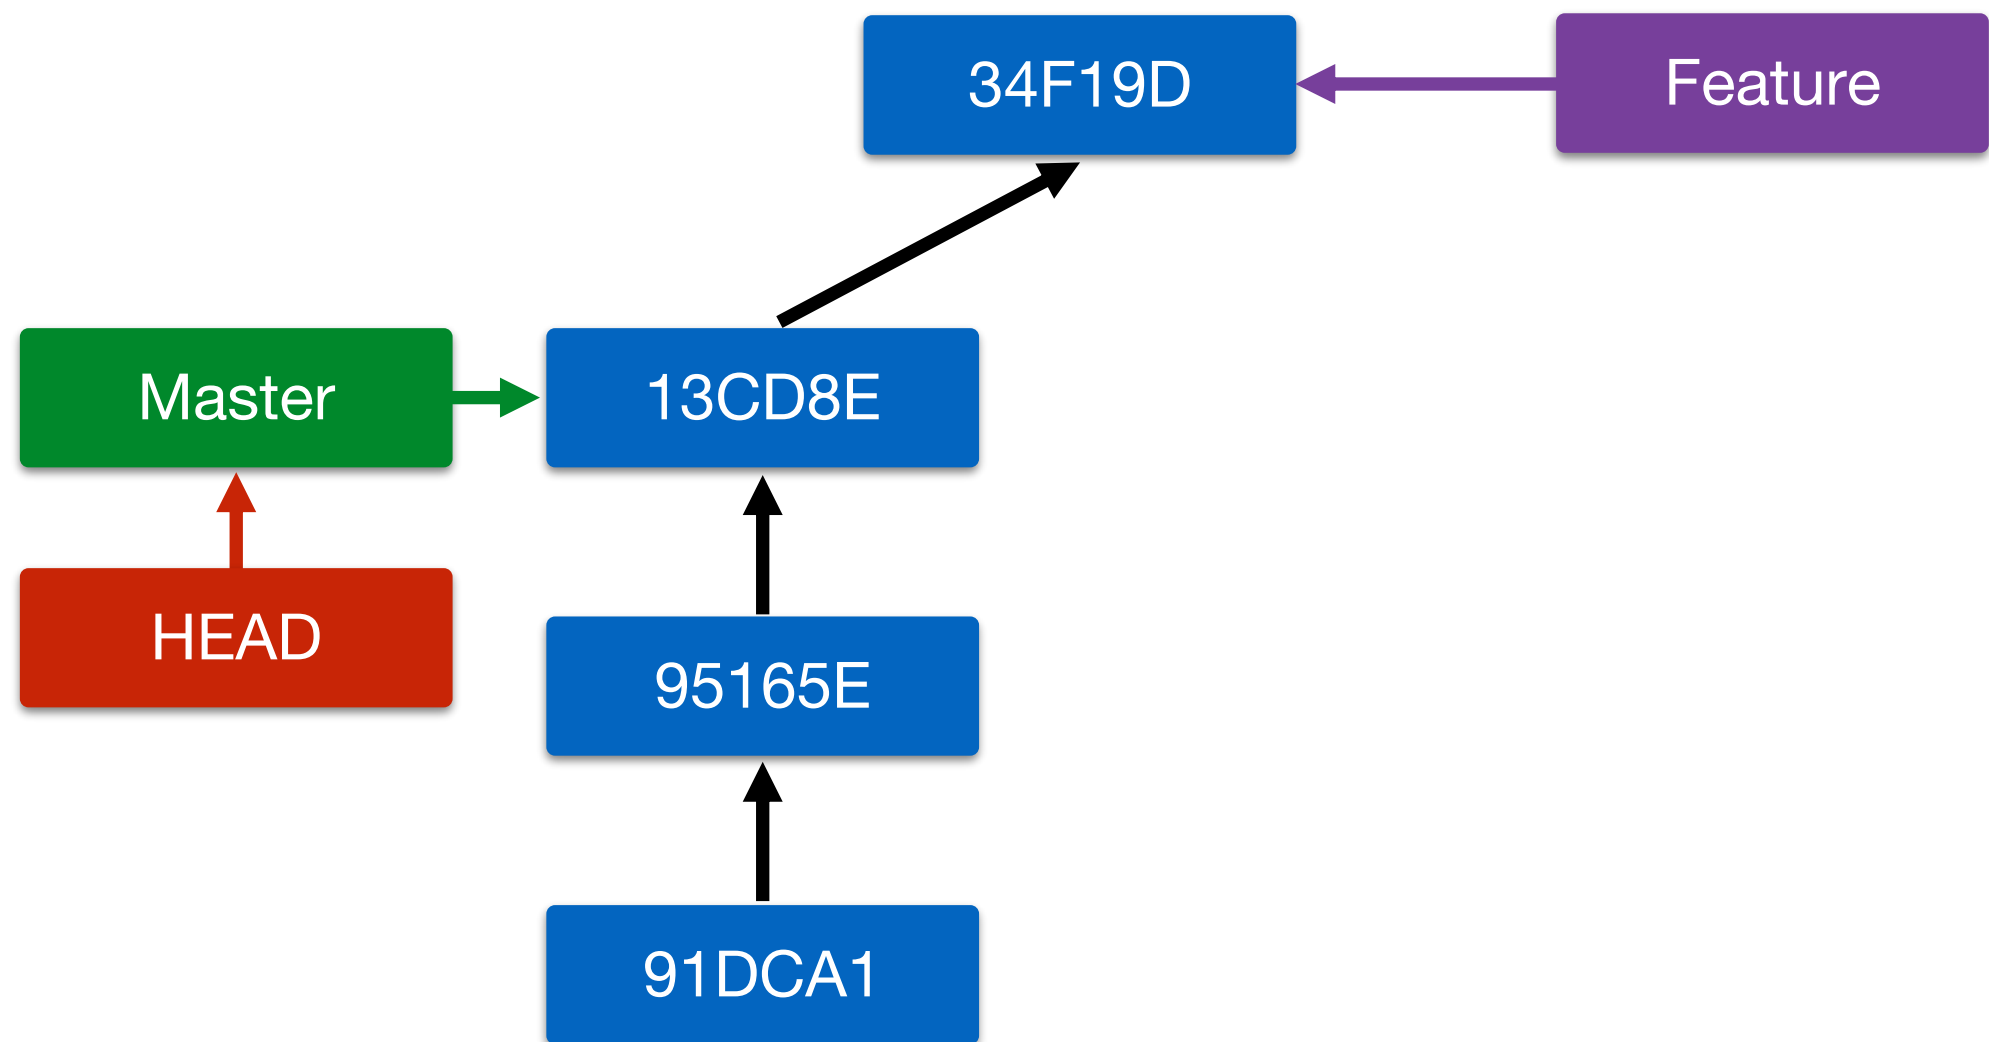

Branching

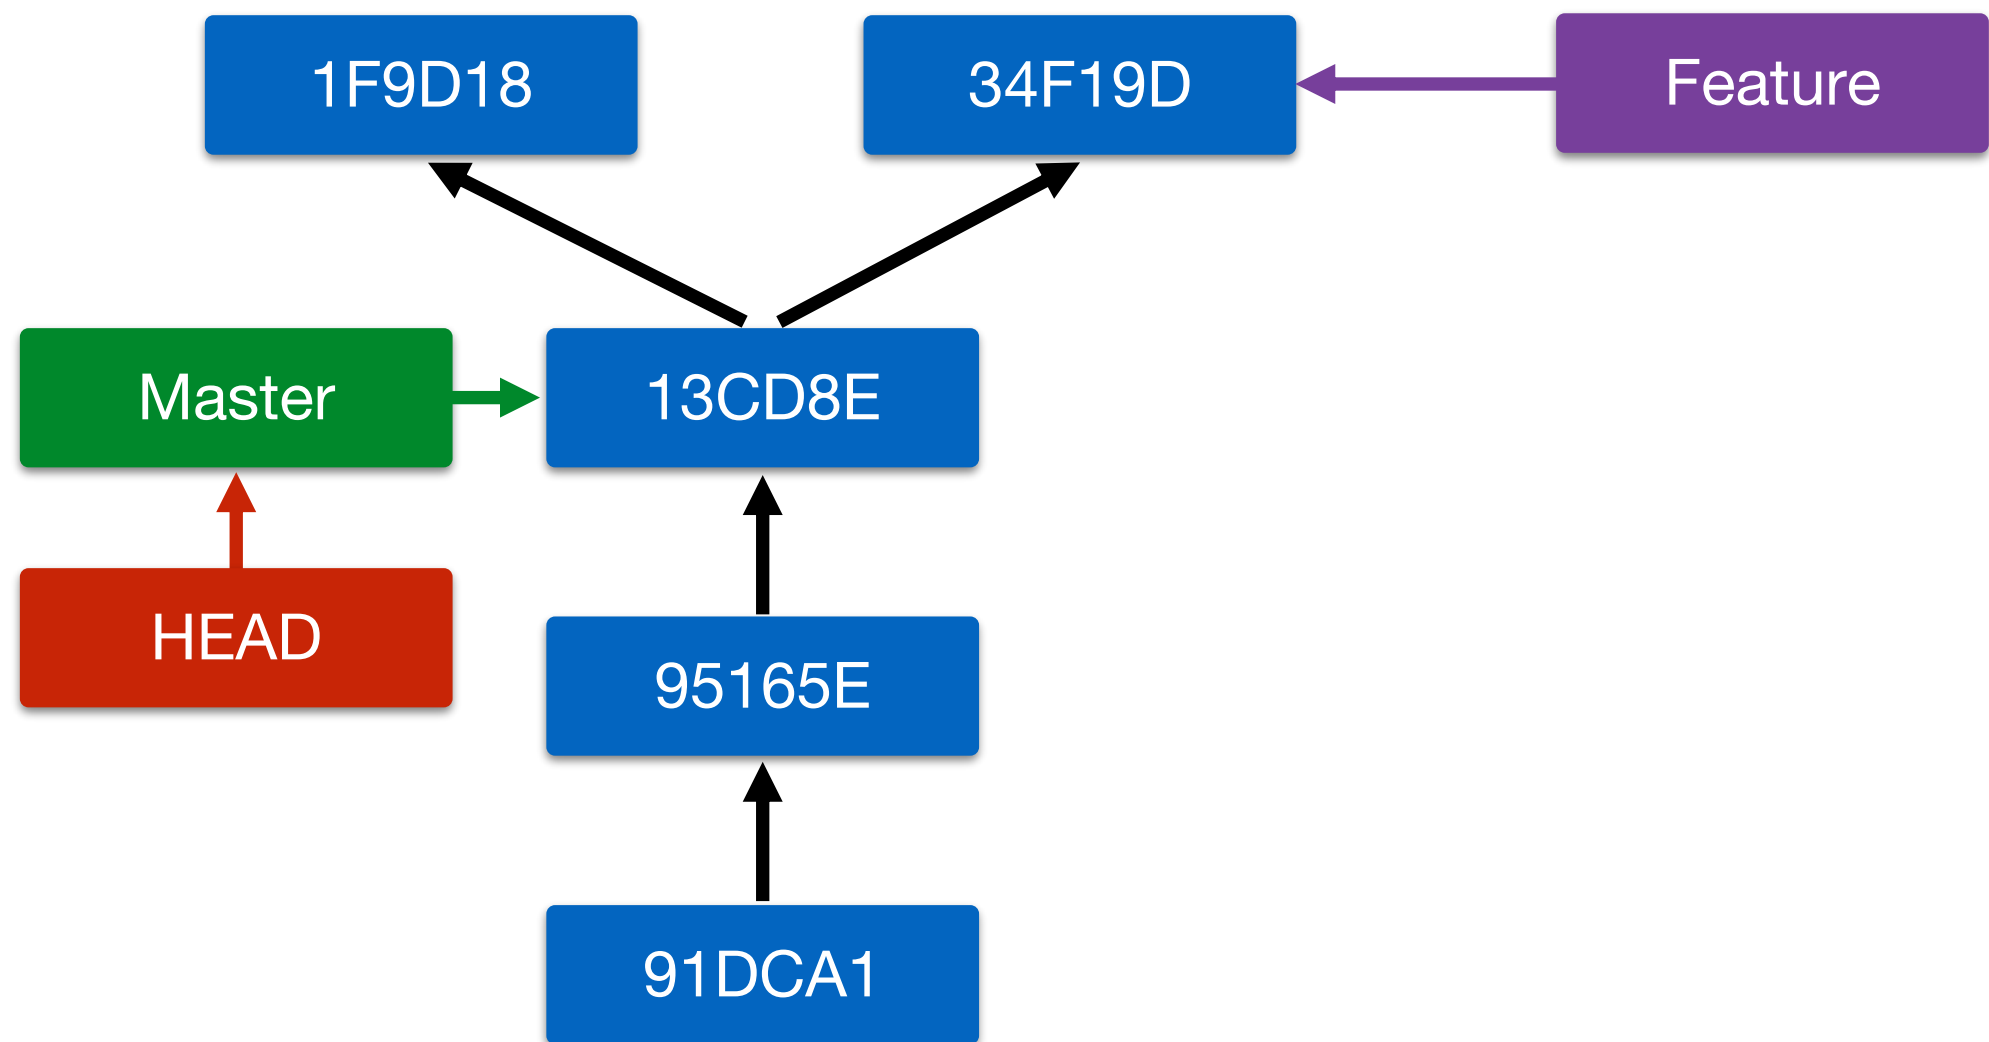

Branching

Branching

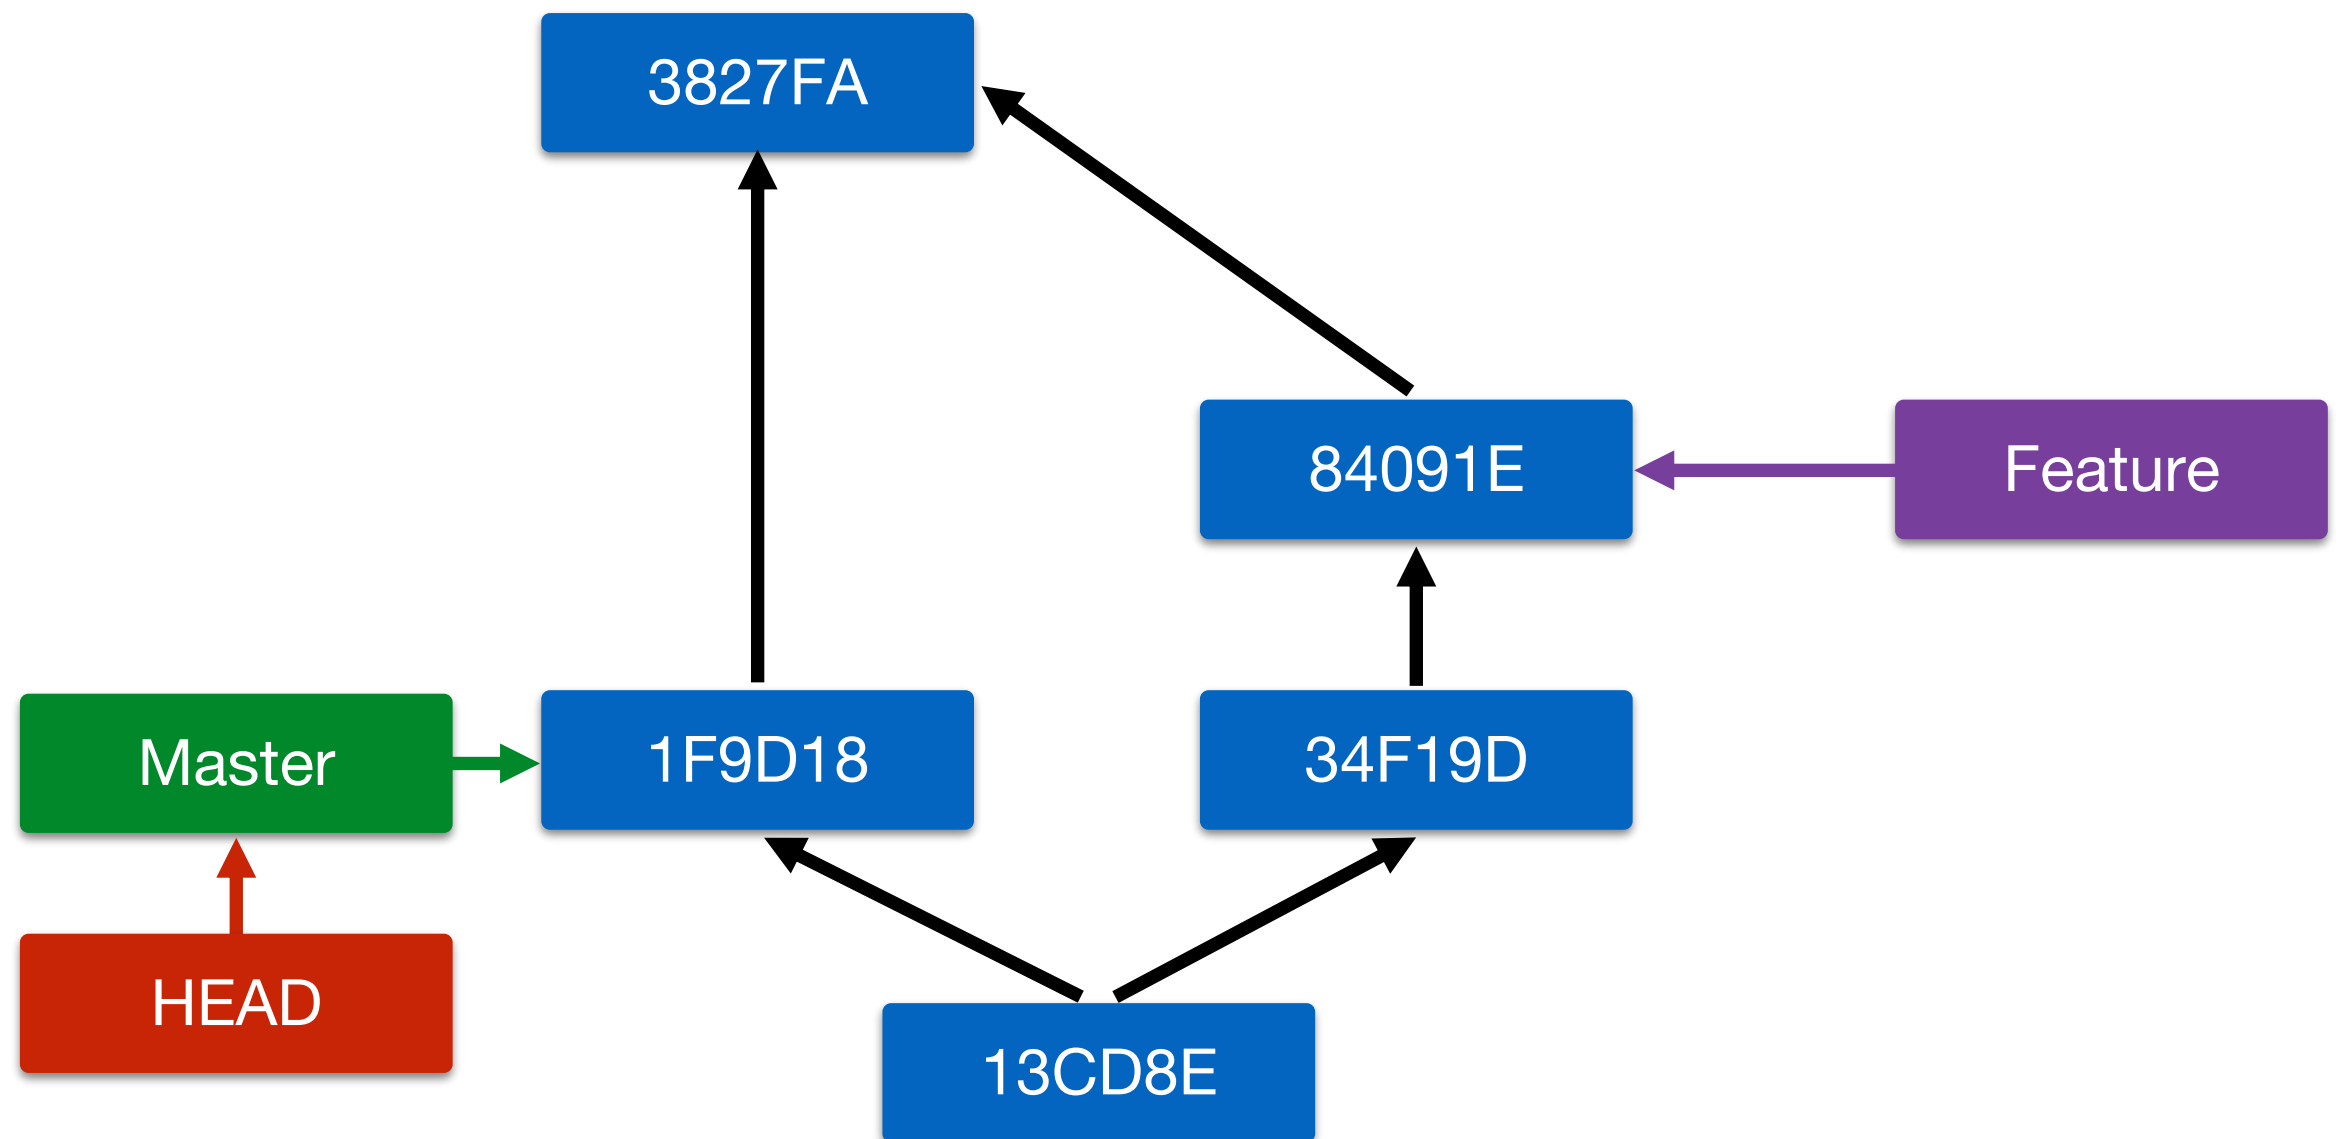

Branching

Git Branching

- Creating a new branch (label)
`git branch [branch name]`
- Checking out the branch (move the HEAD)
`git checkout [branch name]`
- Combining the above commands (create & checkout)
`git checkout -b [branch name]`

Merging

Git Merging

- Merging Steps
 - Checking out a branch to merge
`git checkout [branch 1 name]`
 - Merging another branch
`git merge [branch 2 name]`

Outline

- Version control system
- Git basics
- Git branch
- **Remote repository**

Collaboration with Git

- To work with others using git, you'll need a server that store the repository.
- Git is distributed, which means
 - Everyone can store a copy of the repository downloaded from the server
 - They can do their jobs independently

Collaboration workflow

Collaboration workflow

Collaboration workflow

Collaboration workflow

Cloning & Pushing

- Cloning the remote repositories

```
git clone [Remote URL]
```

- The [Remote URL] is saved as **Origin**

- After committing a few versions, you can push the branch back to **Origin**

```
git push -u origin [Branch Name]
```

Fetch & Pull

- Updating a branch from the remote repository

- Fetching the remote repository to local

```
git fetch origin
```

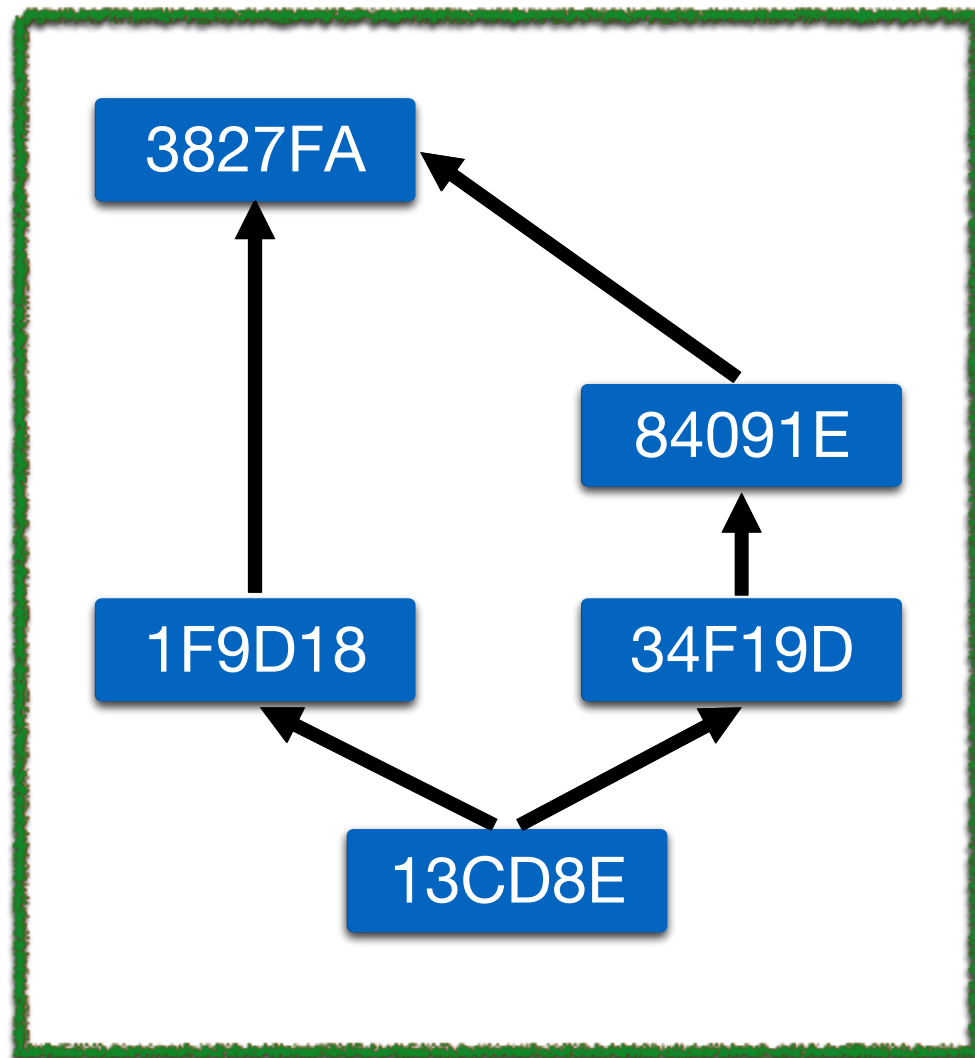

- Merging the remote branch

```
git merge origin/[Branch Name]
```

- Doing above commands in one command

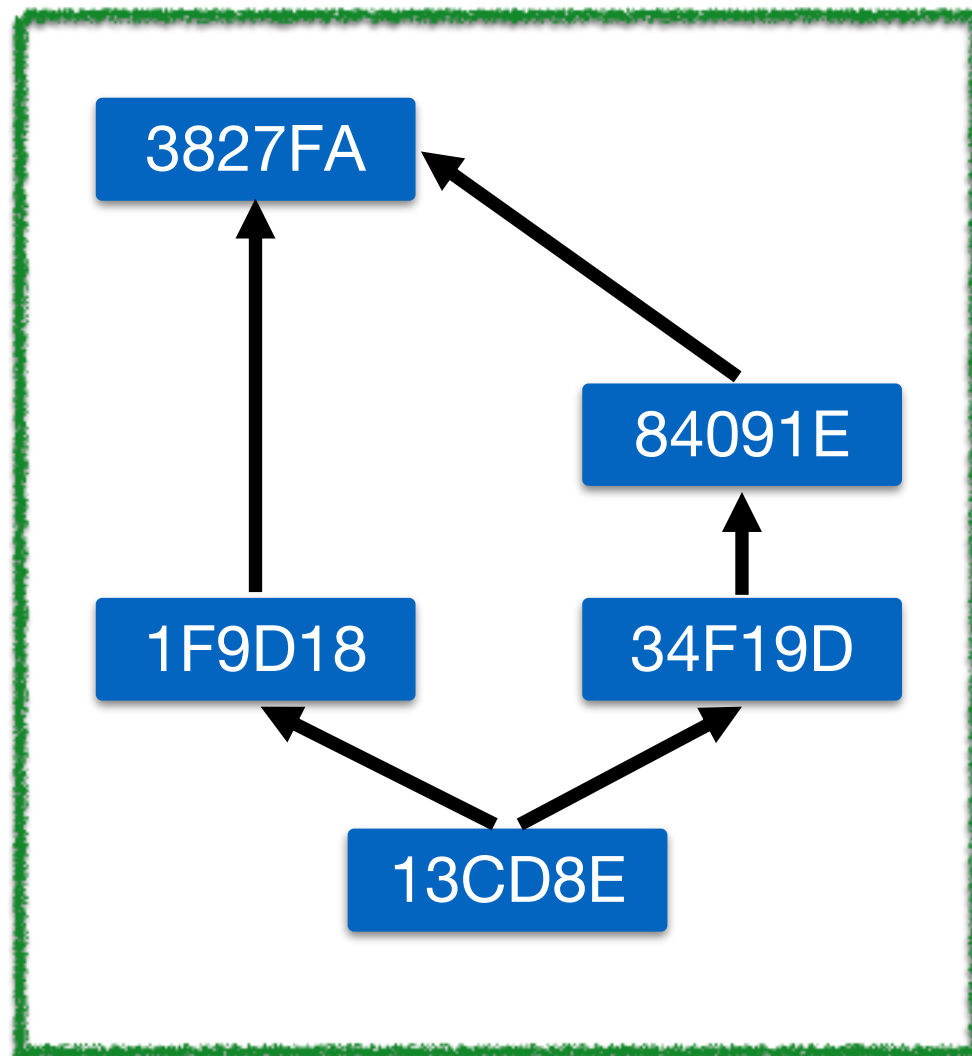

```
git pull [Branch Name]
```

.gitignore File

- You can ignore some files that you don't want them to be tracked by editing the .gitignore file
- Remember to track and commit your .gitignore file
- Don't know what should be in .gitignore ?
 - <https://github.com/github/gitignore>
 - <https://www.gitignore.io/>

How to Submit Your Code to Gitlab

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of **your branch** to our template repository

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of your branch to our template repository

Practice Submission

This repository is built for practicing submissions for assignments and projects. You can follow the instructions below in order to know the whole

Clone with SSH

git@shwu10.cs.nthu.edu.tw:pywa

Clone with HTTPS

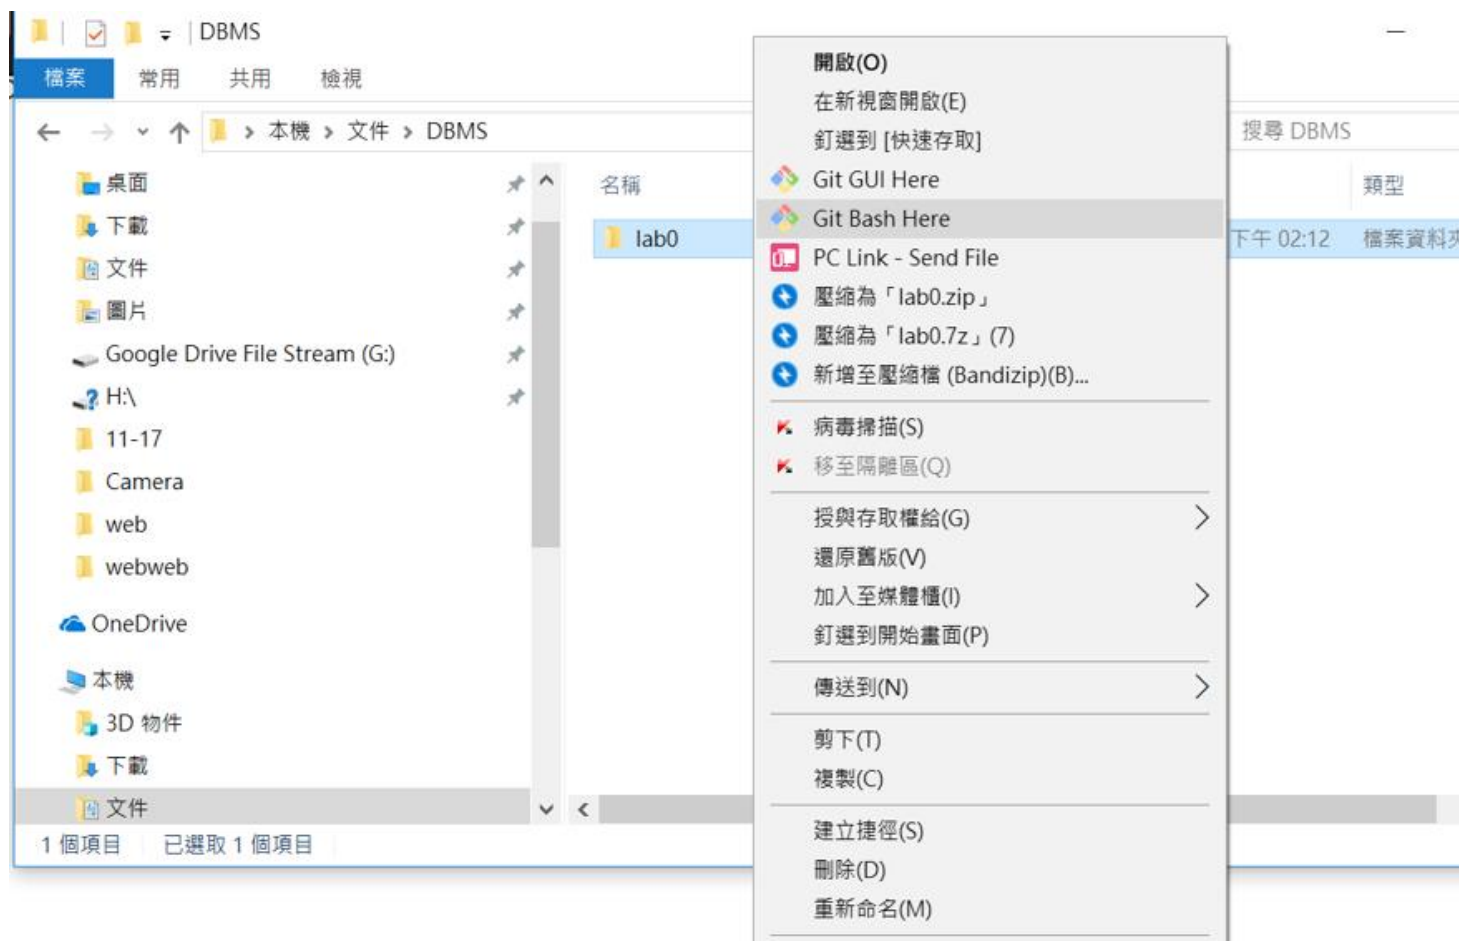

https://shwu10.cs.nthu.edu.tw/p

9af13851

2. Copy the link

1. Choose HTTPS

If You use Windows

```
yicchen@LAPTOP-V7AFE0V7 MINGW64 ~/Documents/DBMS/lab0
$ git clone https://shwu10.cs.nthu.edu.tw/ycchen/practice-submission.git
Cloning into 'practice-submission'...
remote: Counting objects: 3, done.
remote: Compressing objects: 100% (2/2), done.
remote: Total 3 (delta 0), reused 3 (delta 0)
Unpacking objects: 100% (3/3), done.

yicchen@LAPTOP-V7AFE0V7 MINGW64 ~/Documents/DBMS/lab0
$ ls
practice-submission/

yicchen@LAPTOP-V7AFE0V7 MINGW64 ~/Documents/DBMS/lab0
$ ..
```

3. Create a folder to put your repos

```
yicchen@LAPTOP-V7AFE0V7 MINGW64 ~/Documents/DBMS/lab0
$ git clone https://shwu10.cs.nthu.edu.tw/ycchen/practice-submission.git
Cloning into 'practice-submission'...
remote: Counting objects: 3, done.
remote: Compressing objects: 100% (2/2), done.
remote: Total 3 (delta 0), reused 3 (delta 0)
Unpacking objects: 100% (3/3), done.
```

4. Type "git clone {URL}"

```
yicchen@LAPTOP-V7AFE0V7 MINGW64 ~/Documents/DBMS/lab0
$ ls
practice-submission/
```

```
yicchen@LAPTOP-V7AFE0V7 MINGW64 ~/Documents/DBMS/lab0
$
```

5. The repo has been successfully cloned

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 - 3. Finish your lab**
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of your branch to our template repository

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab

 5. Push to Gitlab
 6. Send merge request of your branch to our template repository

```
yicchen@LAPTOP-V7AFEOV7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
```

```
$ git add -A
```

1. -A means all files

```
yicchen@LAPTOP-V7AFEOV7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
```

```
$ git status
```

```
On branch master
```

```
Your branch is up-to-date with the upstream branch.
```

2. Check if your file is added to git

```
Changes to be committed:
```

```
(use "git reset HEAD <file>..." to unstage)
```

```
new file:   practice.txt
```

```
yicchen@LAPTOP-V7AFEOV7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
```

```
$ git commit -m "Finish"
```

```
[master 93a03d5] Finish
```

```
1 file changed
```

```
create mode 100644 practice.txt
```

3. Commit your changes

```
yicchen@LAPTOP-V7AFE0V7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
```

```
git commit -m "Finish"
```

```
** Please tell me who you are.
```

```
un
```

```
git config --global user.email "you@example.com"
```

```
git config --global user.name "Your Name"
```

```
o set your account's default identity.
```

```
mit --global to set the identity only in this repository
```

```
atal: unable to auto-detect email address (got 'yicchen@LAPTOP-V7AFE0V7.(none)')
```

If you see these message, type
git config --global user.name
"{name}"
git config --global user.email "{email}"
{email} is the email you use on gitlab

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer

Merge Requests

Merge requests are a place to propose changes you've made to a project and discuss those changes with others

Interested parties can even contribute by pushing commits if they want to.

New merge request

2. New merge request

The image shows the GitLab web interface for creating a new merge request. The left sidebar contains navigation links: Project, Repository, Issues (0), Merge Requests (0), Wiki, Snippets, and Settings. The main content area is titled 'New Merge Request' and is divided into two columns. The left column is for the 'Source branch' and the right column is for the 'Target branch'. Both columns have dropdown menus for the branch name and the branch to merge into (currently 'master'). Below the dropdowns, each column shows a commit: 'first commit' by Pin-Yu Wang (10 minutes ago) with hash 6846e605, and 'Initial commit' by Yi-Chun Chen (7 hours ago) with hash 9af13851. A green button labeled 'Compare branches and continue' is located below the source branch section. Three red callout boxes with white text provide instructions: '3. Choose the branch you pushed in your repo' points to the source branch dropdown, '4. Choose the branch named after your ID' points to the target branch dropdown, and '5. Compare branches' points to the green button.
