

# Introduction to Benchmark

Database Systems  
DataLab, CS, NTHU  
Spring, 2023

# Outline

- VanillaBench Project
  - Introduction to VanillaBench
  - Setting Benchmark Configurations
  - Starting Up Server for Benchmarking
  - Running Benchmark Client
- Assignment 2

# Outline

- VanillaBench Project
  - Introduction to VanillaBench
  - Setting Benchmark Configurations
  - Starting Up Server for Benchmarking
  - Running Benchmark Client
  - Assignment 2

# VanillaBench

- VanillaBench is a project designed for automatically benchmarking VanillaCore
- It contains several benchmark procedures
- It also has a lot of adjustable testing parameters

# Two Main Methods

# JDBC / SP ?

# Create SP

-- Insert user

```
CREATE PROCEDURE insertuser(uname VARCHAR(50), ukarma INT)
LANGUAGE SQL
AS $$
    INSERT INTO users(name, karma) VALUES (uname, ukarma);
$$;
```

-- Insert post

```
CREATE PROCEDURE insertpost(uname VARCHAR(50), post TEXT)
LANGUAGE SQL
AS $$
    INSERT INTO posts(text, "authorId")
    VALUES (post, (SELECT id FROM users WHERE name = uname));
$$;
```

# Outline

  - Introduction to VanillaBench
  - Setting Benchmark Configurations
  - Starting Up Server for Benchmarking
  - Running Benchmark Client
  - Assignment 2

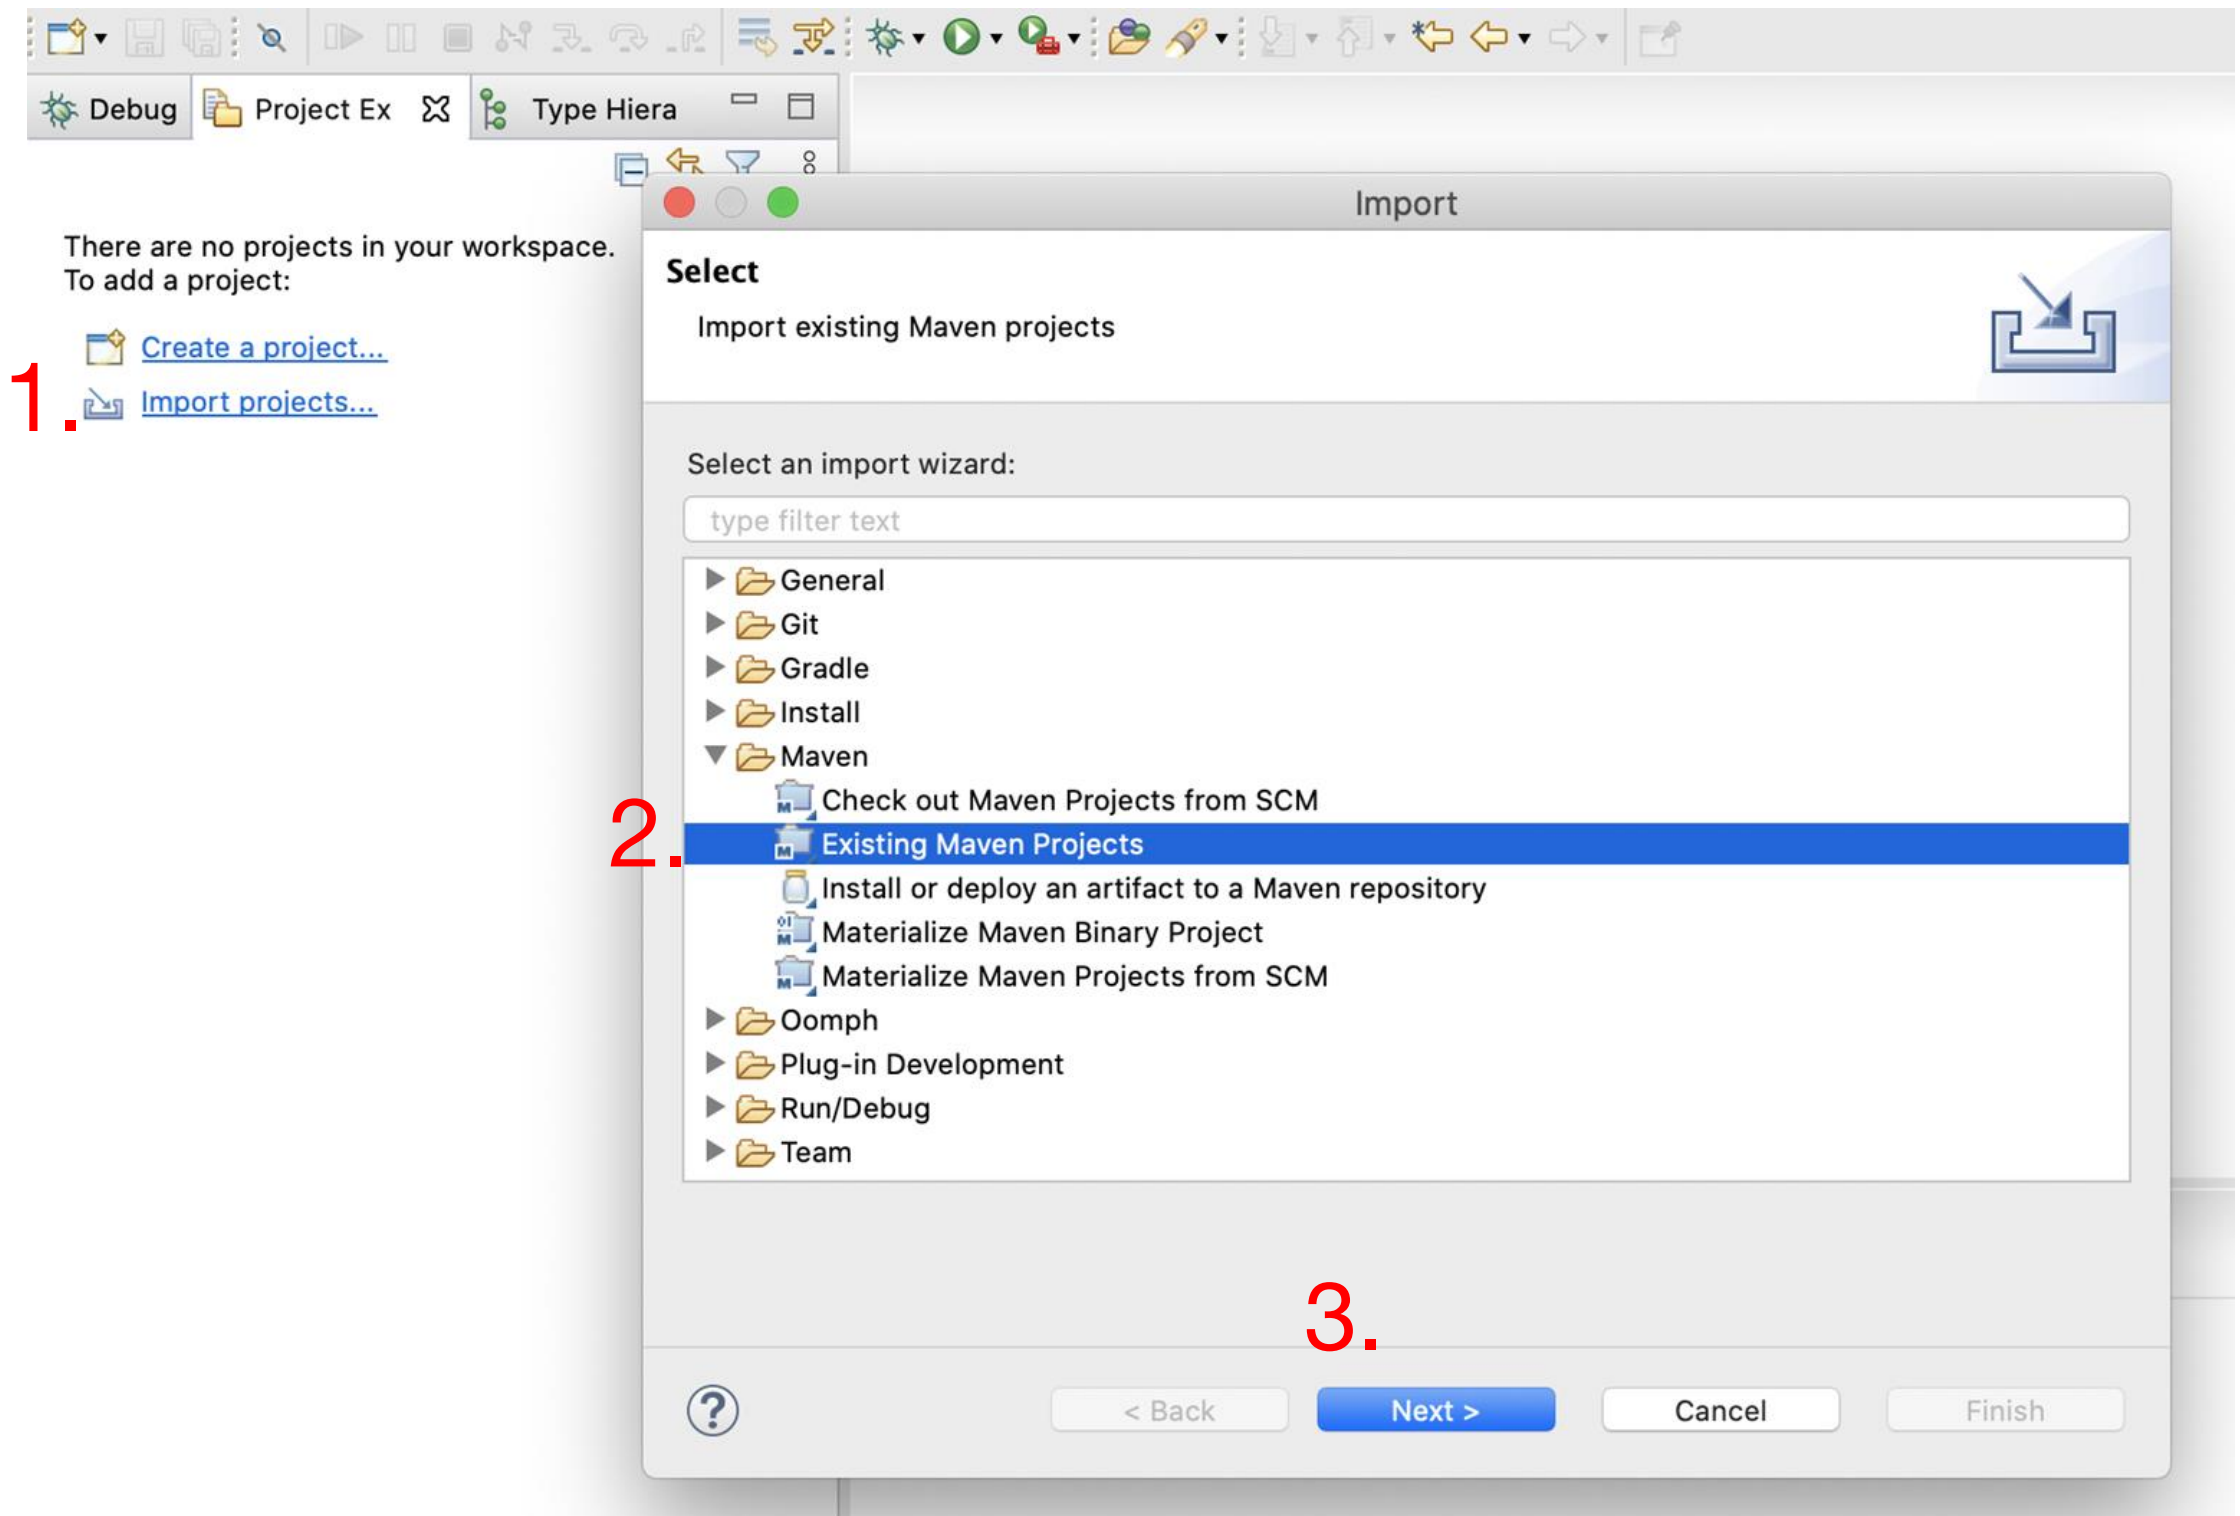

# Clone the Project First

- The code of VanillaBench has been pushed to vanilladb repository
- All you need is to clone from the remote repository

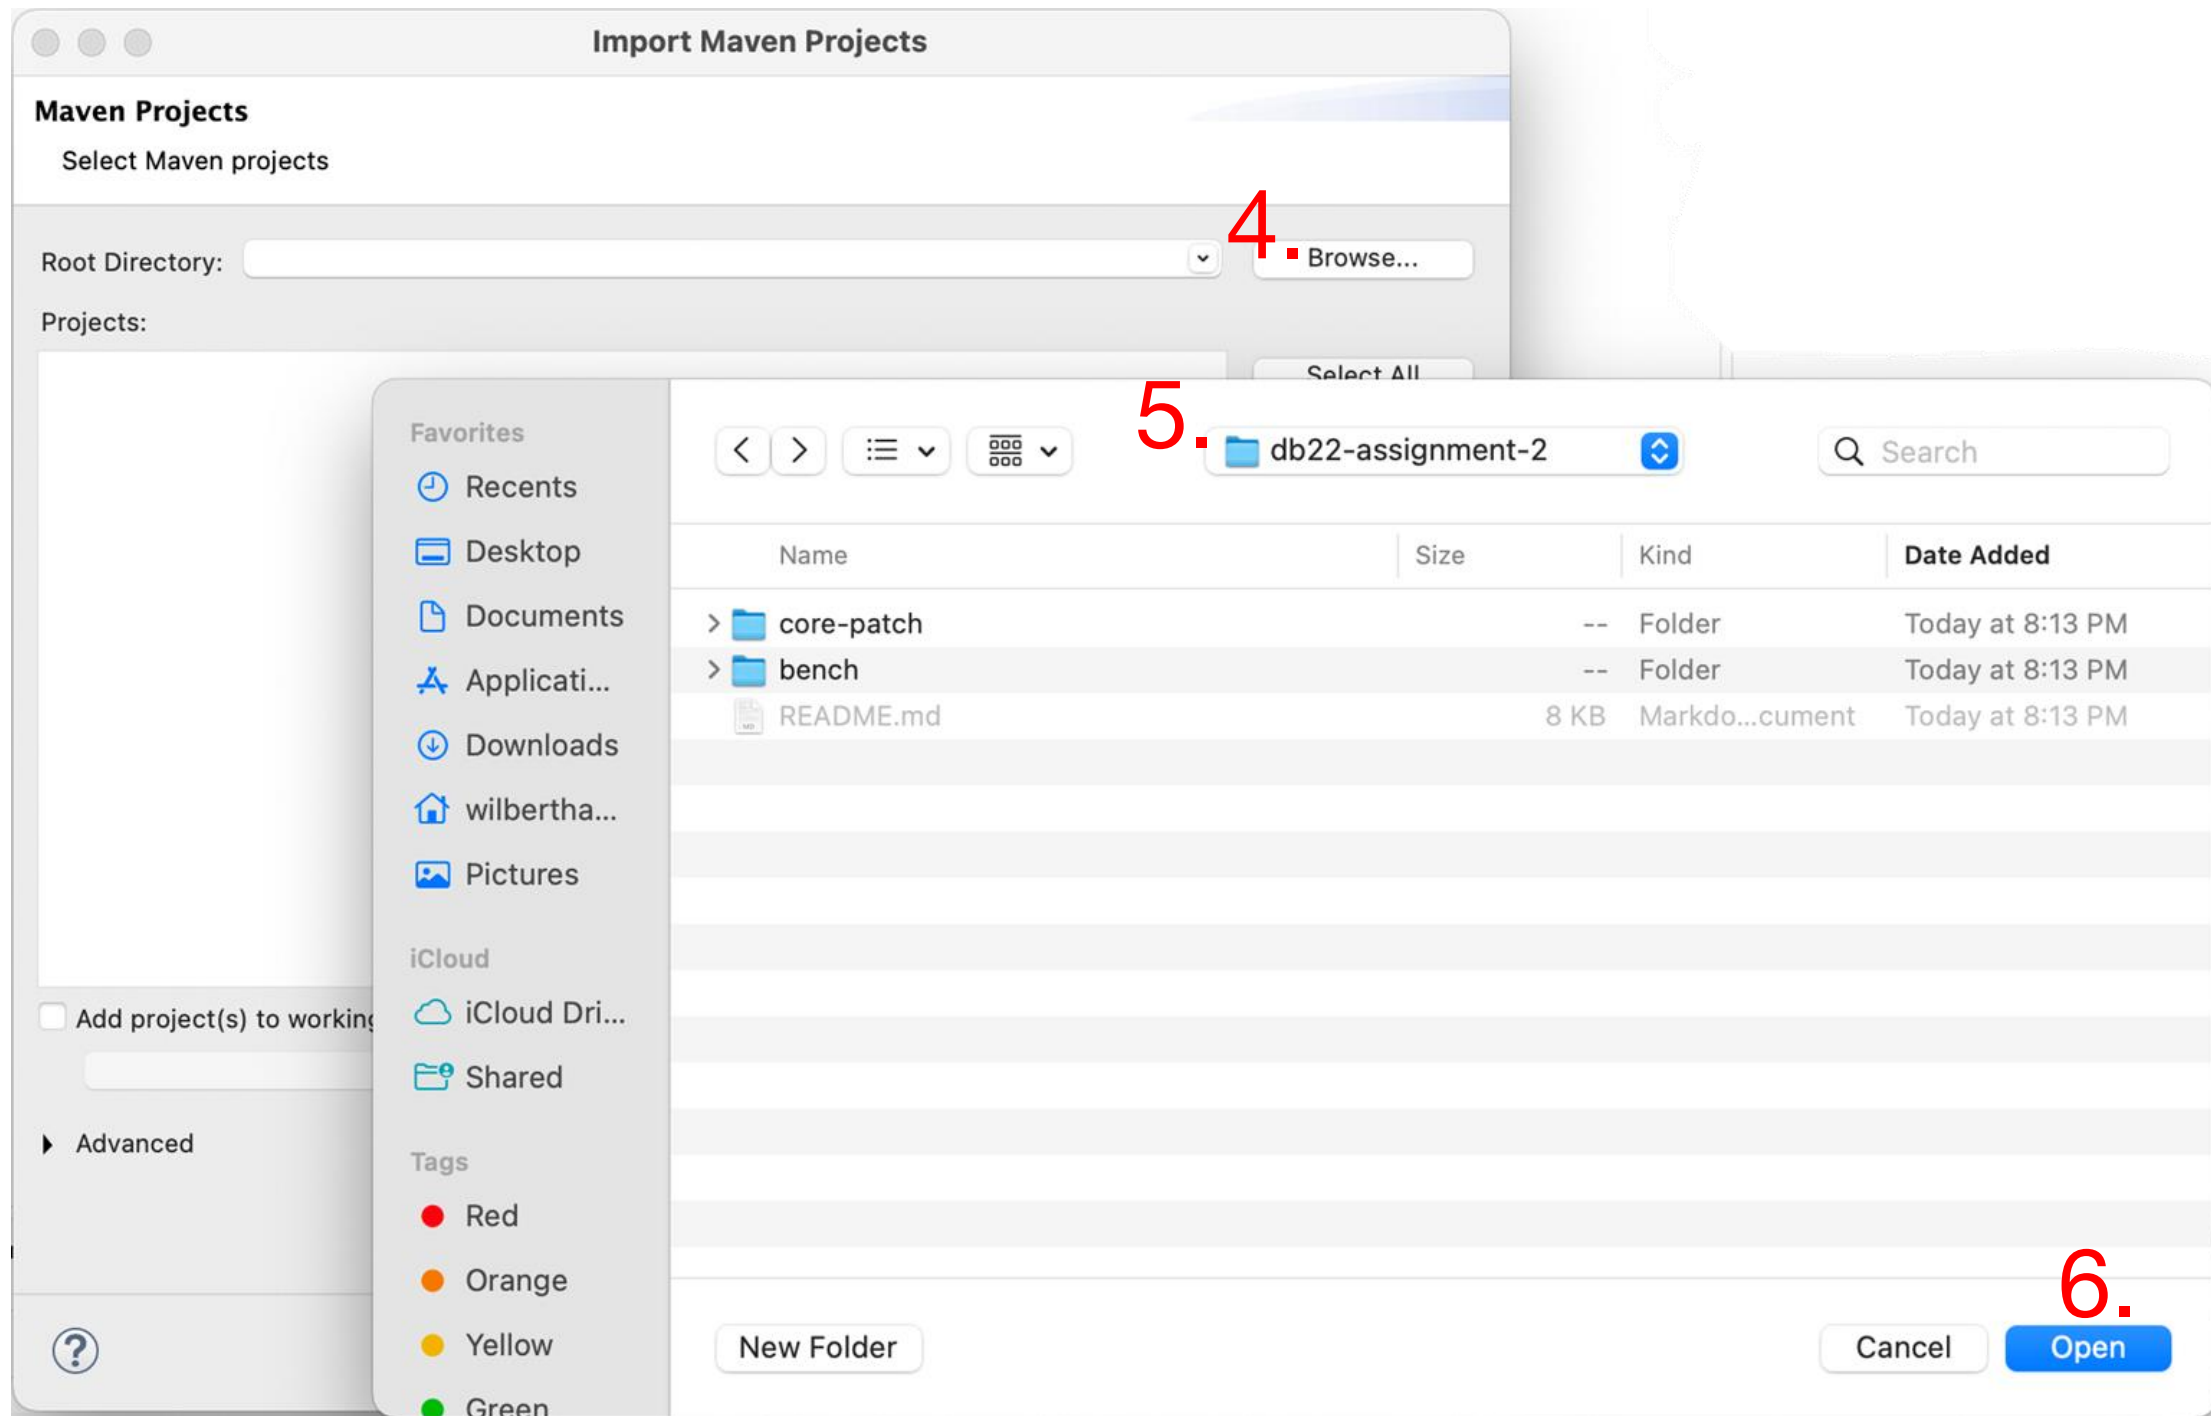

```
> git clone
```

- You can clone from here:
  - <https://shwu10.cs.nthu.edu.tw/courses/databases/2023-spring/db23-assignment-2>

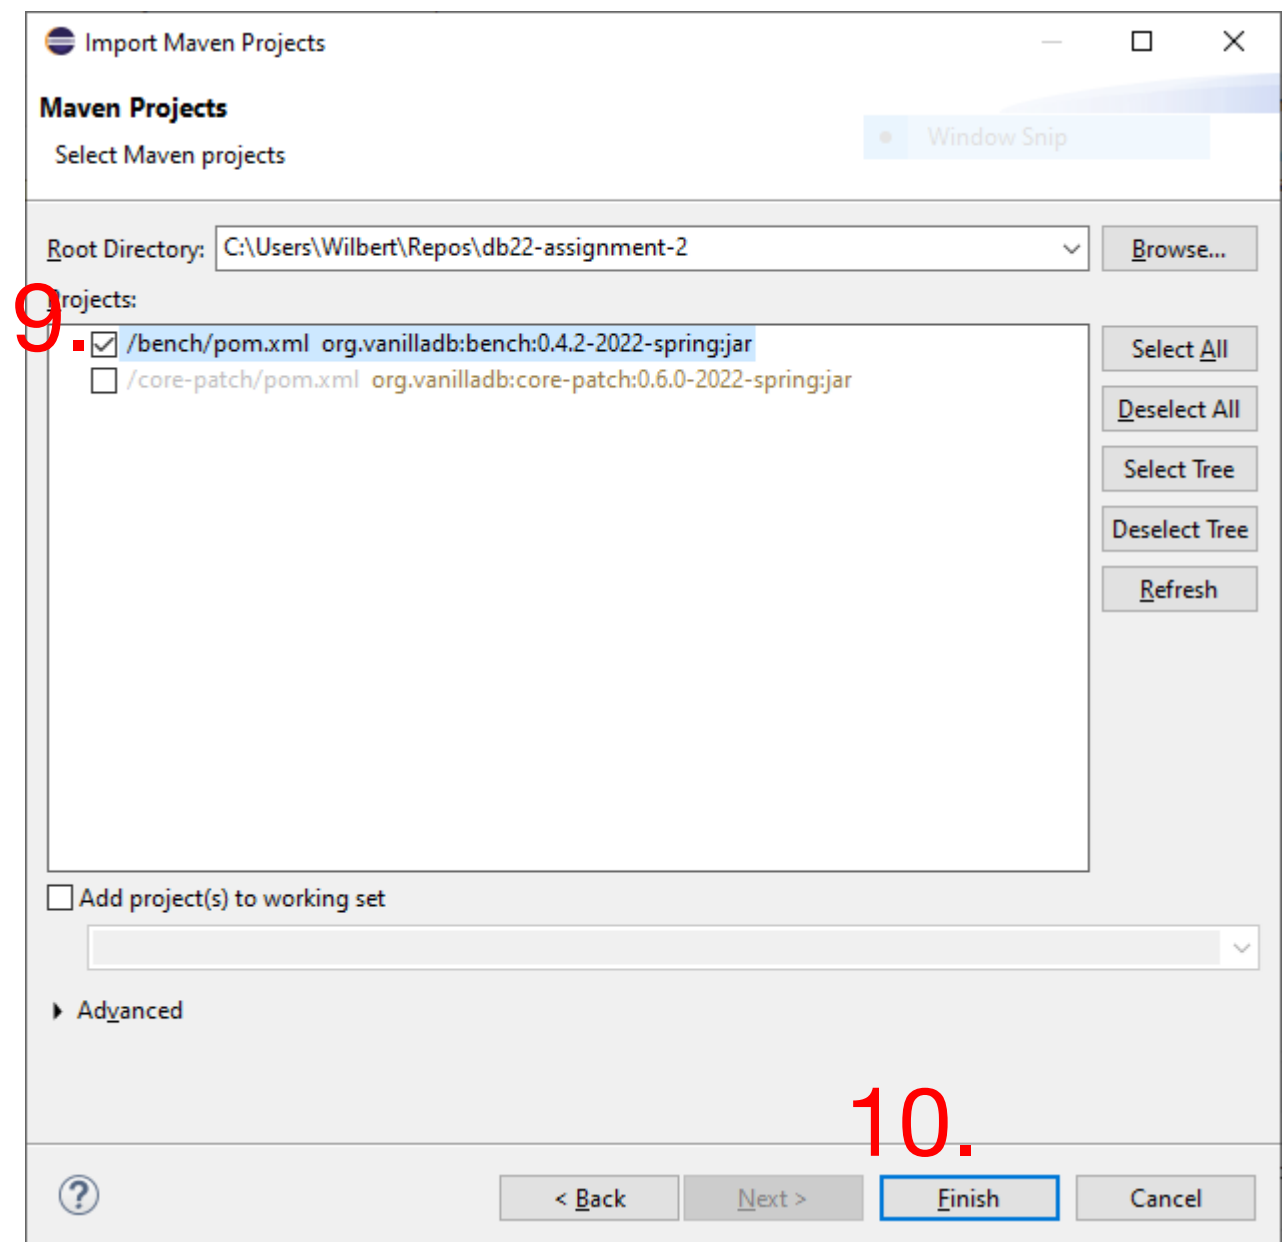

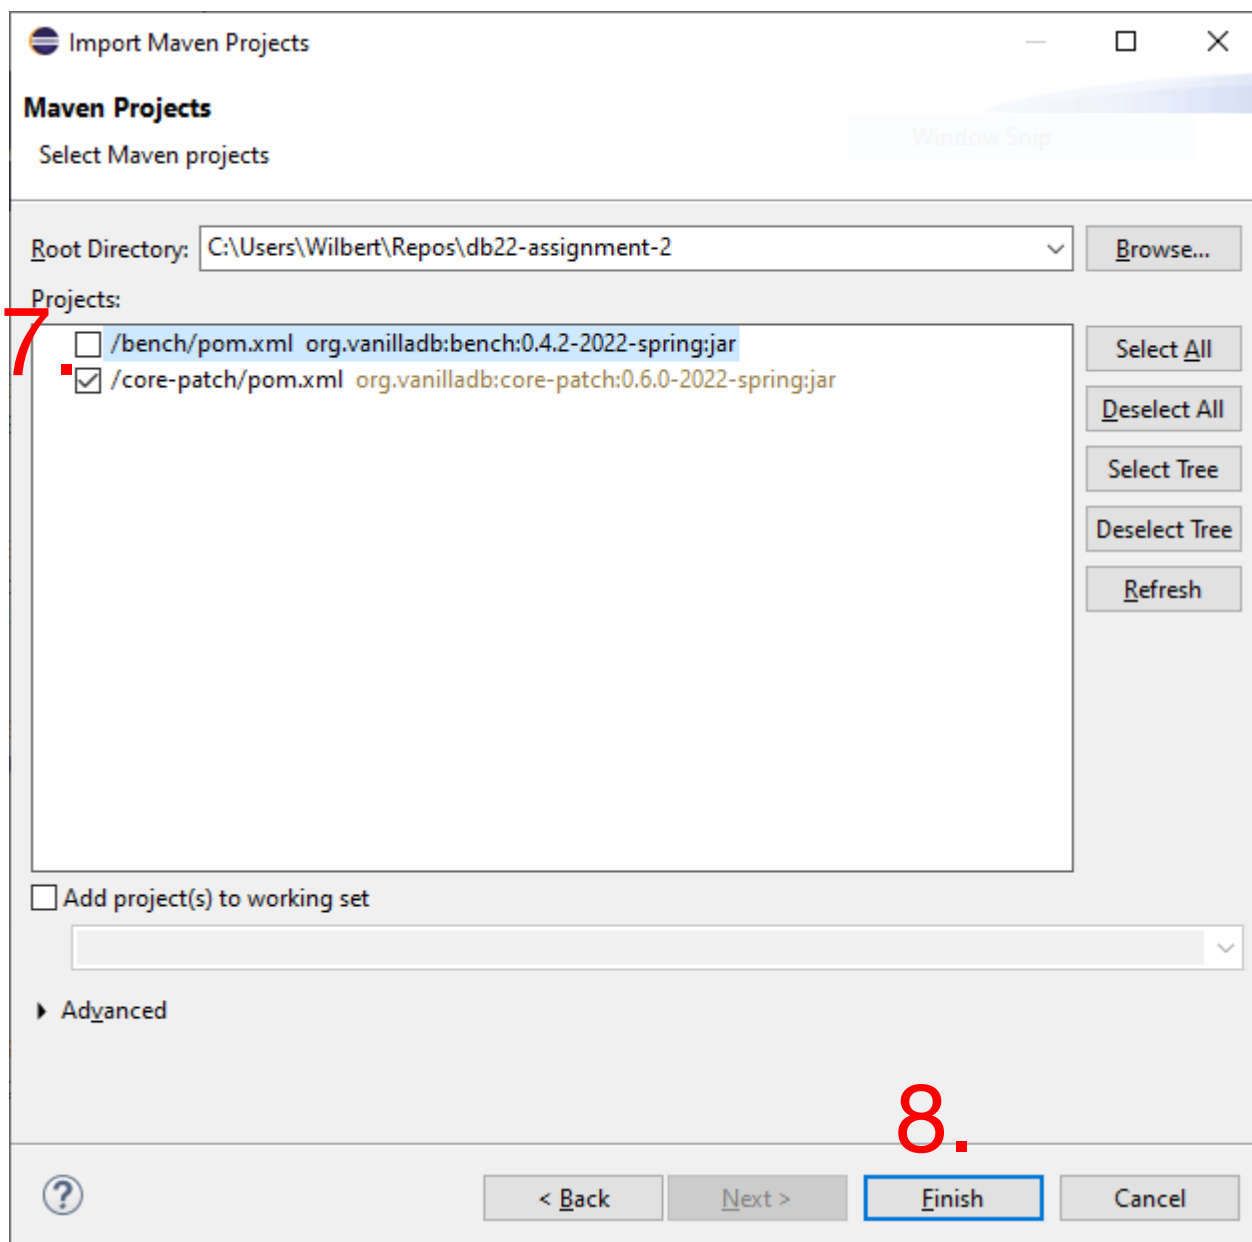

# Import Project(1/3)

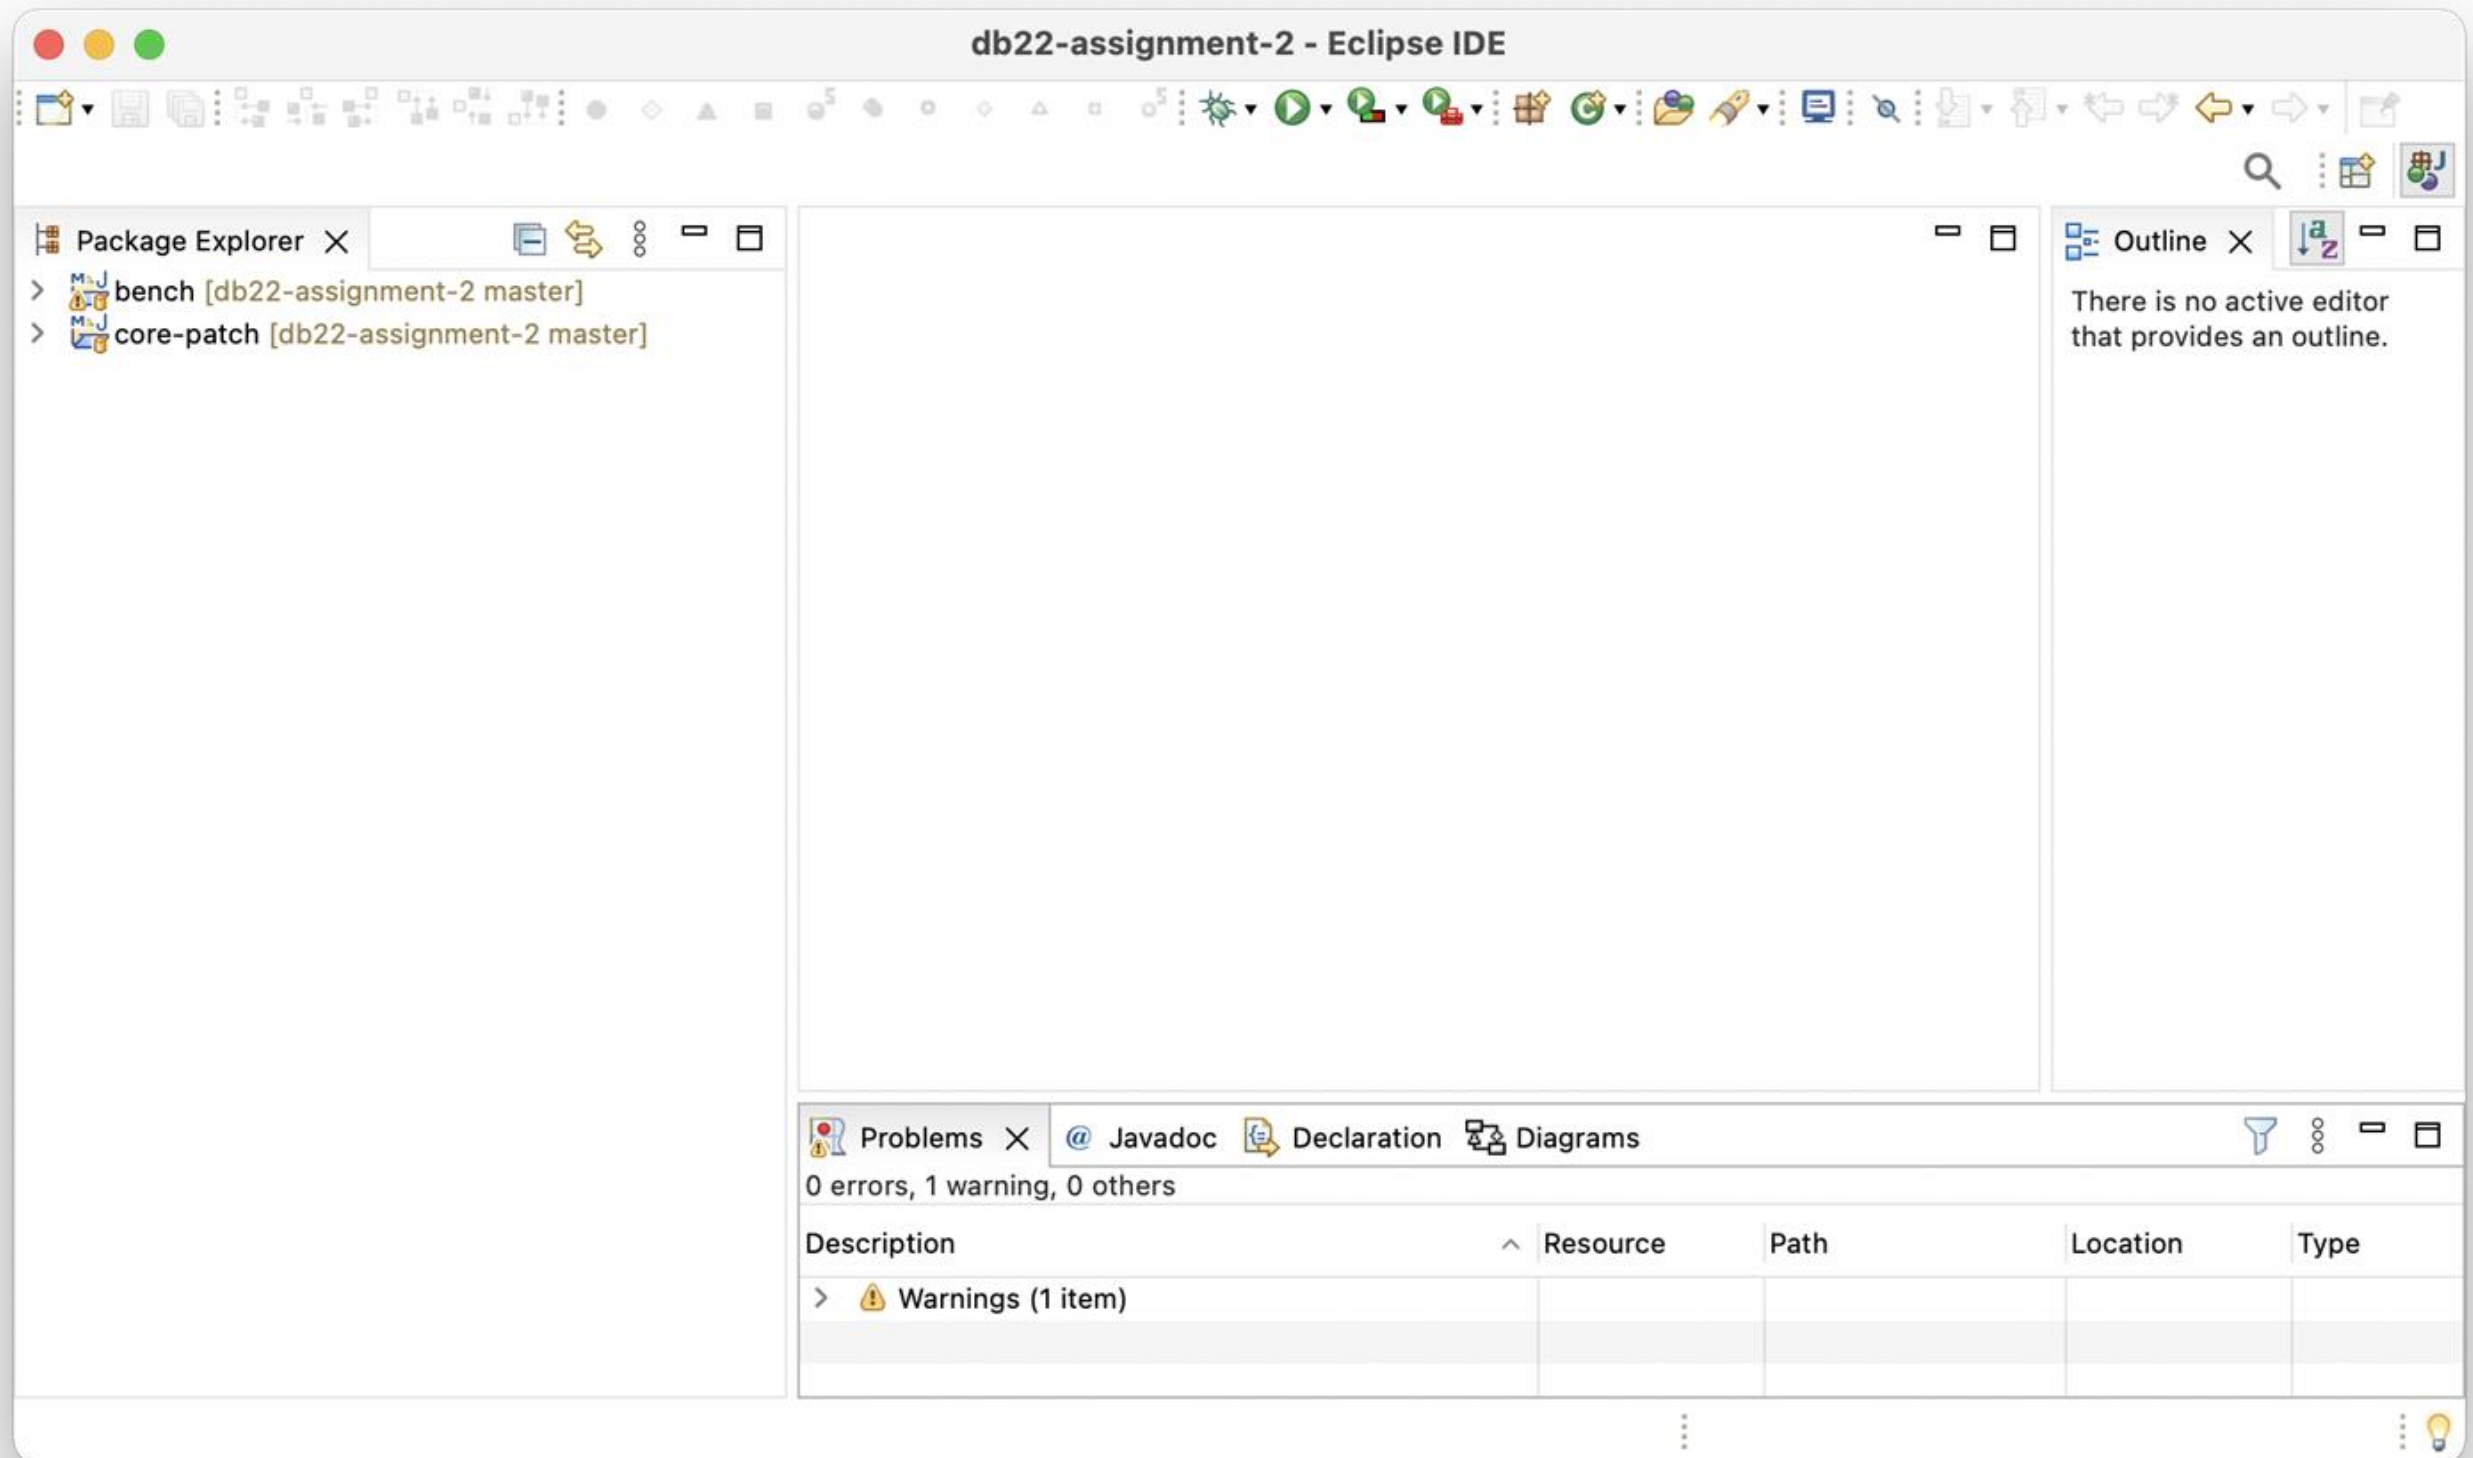

# Import Project(2/3)

# Import Project(3/3)

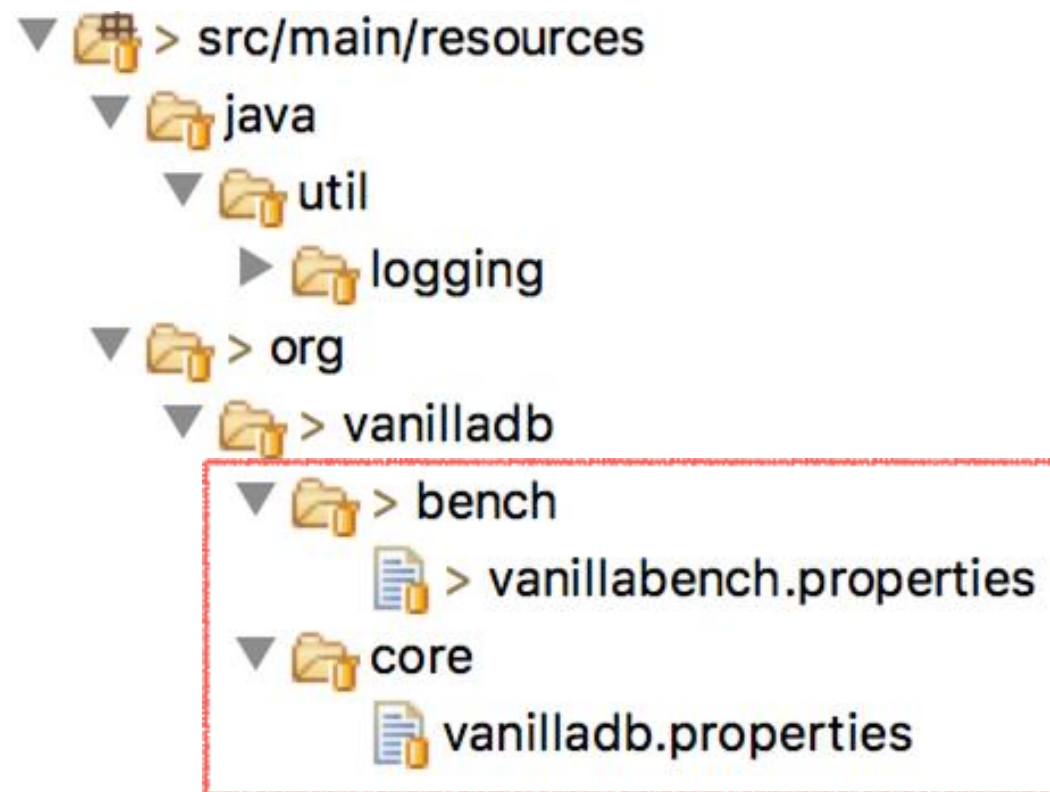

# Finish Import Projects

# Benchmark Setting

- Benchmark project also has its own set of properties files

```
17 #
18 # Basic Parameters
19 #
20
21 # The running time for warming up before benchmarking
22 org.vanilladb.bench.VanillaBenchParameters.WARM_UP_INTERVAL=60000
23 # The running time for benchmarking
24 org.vanilladb.bench.VanillaBenchParameters.BENCHMARK_INTERVAL=60000
25 # The number of remote terminal executors for benchmarking
26 org.vanilladb.bench.VanillaBenchParameters.NUM_RTES=2
27 # The sleeping time (in milliseconds) between transactions for each RTE
28 # 0 = no sleeping, 100 is a generally good number for under-loaded workloads
29 org.vanilladb.bench.VanillaBenchParameters.RTE_SLEEP_TIME=0
30 # The IP of the target database server
31 org.vanilladb.bench.VanillaBenchParameters.SERVER_IP=127.0.0.1
32 # 1 = JDBC, 2 = Stored Procedures
33 org.vanilladb.bench.VanillaBenchParameters.CONNECTION_MODE=2
34 # 1 = AS2
35 org.vanilladb.bench.VanillaBenchParameters.BENCH_TYPE=1
36 # Whether it enables the built-in profiler on the server
37 org.vanilladb.bench.VanillaBenchParameters.PROFILING_ON_SERVER=false
38 # The path to the generated reports
39 org.vanilladb.bench.VanillaBenchParameters.REPORT_OUTPUT_DIRECTORY=
40 # The granularity for summarizing the performance of benchmarking
41 org.vanilladb.bench.VanillaBenchParameters.REPORT_TIMELINE_GRANULARITY=1000
42 # Whether the RTEs display the results of each transaction
43 org.vanilladb.bench.VanillaBenchParameters.SHOW_TXN_RESPONSE_ON_CONSOLE=false
44
45 # The number of items in the testing data set
46 org.vanilladb.bench.benchmarks.as2.As2BenchConstants.NUM_ITEMS=100000
47 # Read count
48 org.vanilladb.bench.benchmarks.as2.rte.As2ReadItemParamGen.TOTAL_READ_COUNT=10
49
```

```

# Outline

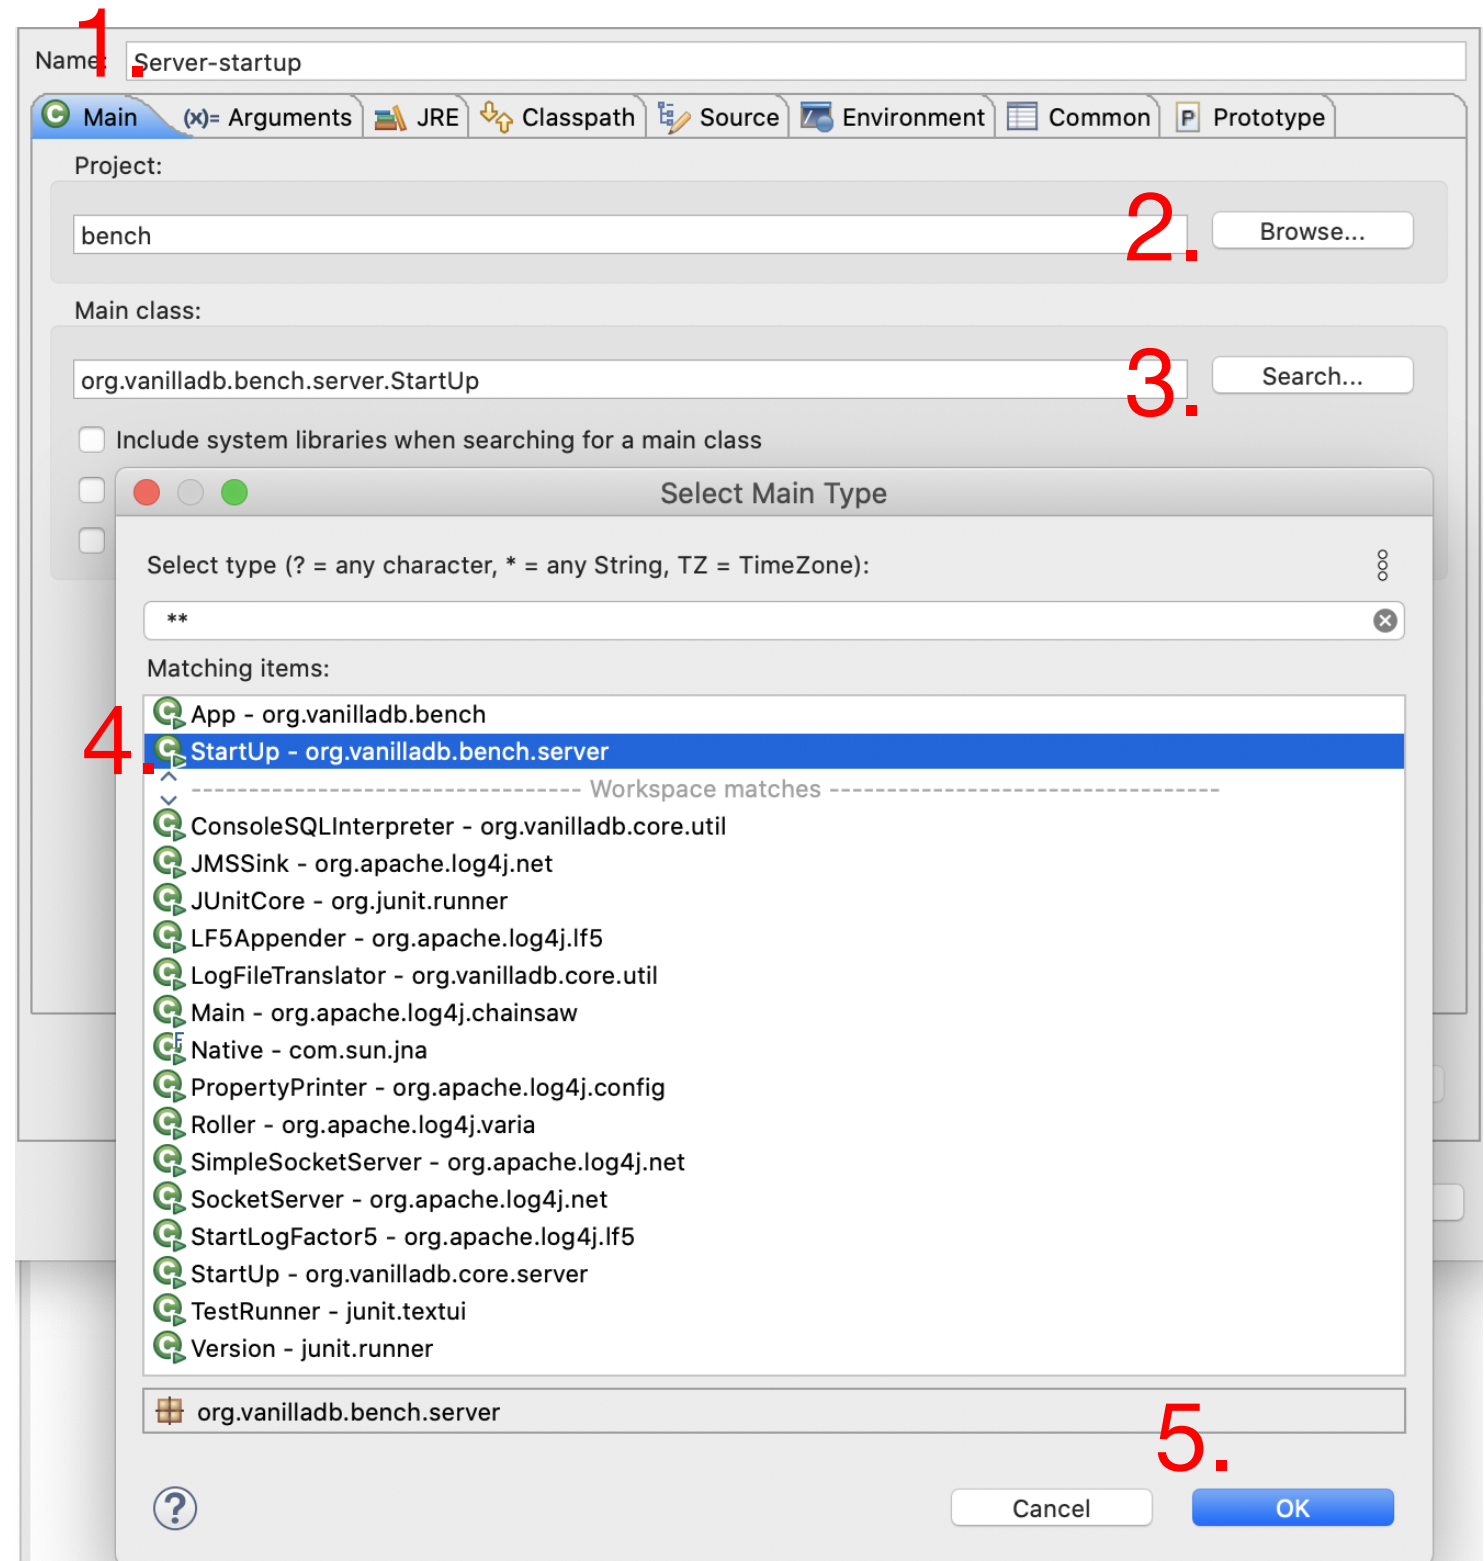

- VanillaBench Project
  - Introduction to VanillaBench
  - Setting Benchmark Configurations
  - Starting Up Server for Benchmarking
  - Running Benchmark Client
  - Assignment 2

# Two Main Methods

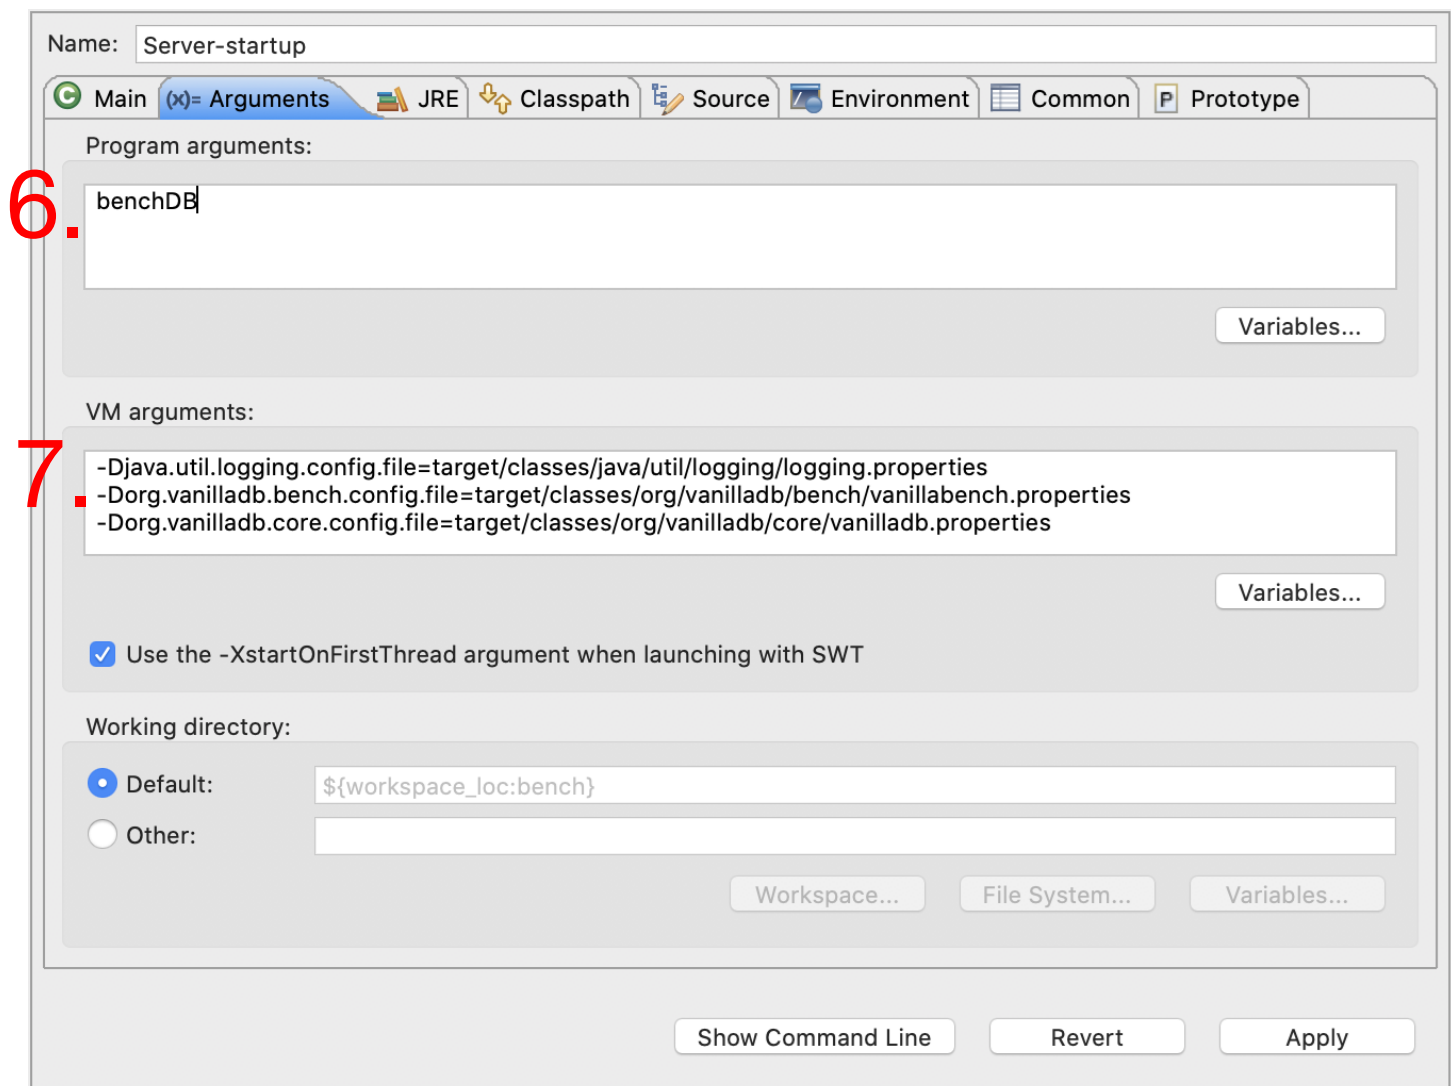

# Starting Up Server (1/2)

- To benchmark a VanillaDB server, you need to start up the server in another entry point

# Starting Up Server (2/2)

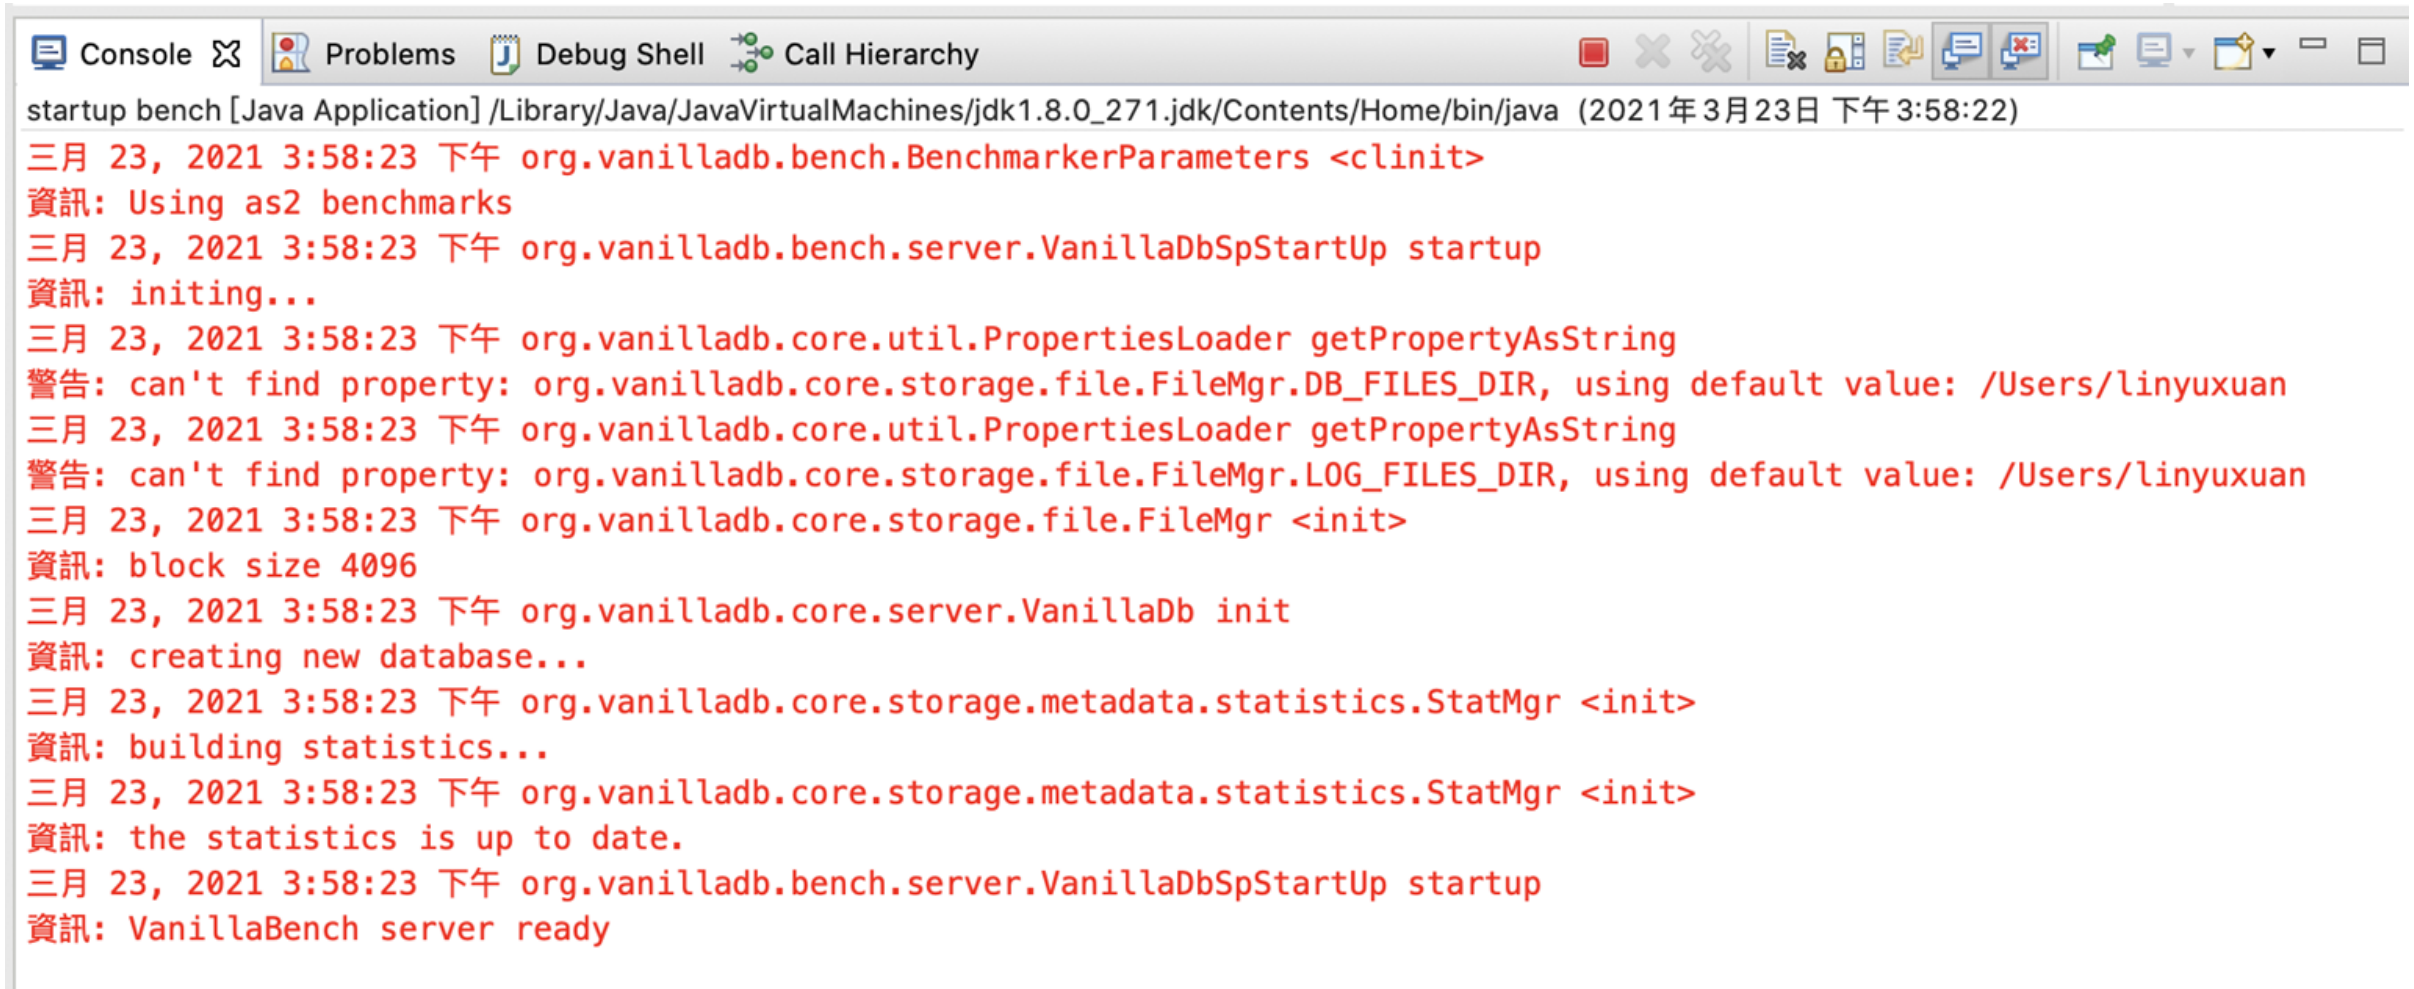

- Add the Database Directory Name
- You also need to add one more VM argument for benchmarking.

You can copy those arguments from [here](#).

# Server Messages

The screenshot shows an IDE console window with the following tabs: Console, Problems, Debug Shell, and Call Hierarchy. The console output is as follows:

```
startup bench [Java Application] /Library/Java/JavaVirtualMachines/jdk1.8.0_271.jdk/Contents/Home/bin/java (2021年3月23日 下午3:58:22)

# Client Messages

The screenshot shows an IDE console window with a tab labeled 'Console'. The console output is in red text and shows the execution of a benchmark application. The messages include status updates like 'creating 2 emulators...', 'waiting for connections...', 'start benchmarking.', 'warm up period finished.', 'start recording results...', 'benchmark preiod finished. Stoping RTEs...', 'Finish creating benchmark report.', and 'benchmark process finished.'. Each message is preceded by a timestamp and a log level indicator (e.g., '三月 25, 2021 10:47:14 上午'). The console window also shows tabs for 'Problems', 'Debug Shell', and 'Call Hierarchy'.
